ABSTRACT

This paper presents a computer aided instruction program that fulfills the objectives of teaching a simple programming language, interpreting student responses, and executing and editing student programs. The CAI-BASIC program is written in FORTRAN IV, level G, and executes on IBM- 2741 terminals while running under the CP-67/CMS time sharing system on the U. S. Naval Postgraduate School's IBM-360/67 computer system. The instructional phase of CAI-BASIC presents the fundamentals of "BASIC," a simple user oriented language, in seven lessons. During the instructional sessions the student is presented material and, based on his response to questions, he is routed to the next sequence of instructions. The execution phase of CAI-BASIC allows execution of "BASIC" programs, and has an optional debug feature that provides a trace of program variables to aid the student in finding programming errors. In the event of programming errors the user may enter an edit mode to correct mistakes in his program.

I. INTRODUCTION

During the last few years many sophisticated projects in Computer Assisted Instruction (CAI) have evolved. The potential of this area has captured the imagination of researchers and the public at large. Yet the U. S. COMMISSION ON INSTRUCTIONAL TECHNOLOGY (ref. 9) found that the status of instructional technology in American Education was low in both quantity and quality. There are many reasons that CAI has not been accepted with any marked degree of enthusiasm by educators in general. The major reasons are the exorbitant costs of individualized instruction and illusions over just what CAI is.

A. DEFINITION OF CAI

Computer Assisted Instruction is machine augmented instruction that differs from Programmed Instruction or simple page turning machines in that the computer system has logic and memory capabilities to assist in the instructional process. The main advantage in CAI is that it can individualize education. A student can proceed at his own pace, spending more time on difficult material, and quickly covering material which comes easy to him.

B. CAI DEVELOPMENTS

A. G. OETTINGER, in his book RUN, COMPUTER, RUN (ref. 6) states that educators and the computer industry are equally to blame for the failure of CAI to realize its potential. Instructional technology has been force fed,

oversold, and prematurely applied; and as a result the educators are wary of false promises. OETTINGER feels that colleges and universities will be an effective proving ground for future educational technology. However, at the present time, of the thousands of colleges and universities in the nation only twenty-five are considered major CAI centers.¹

A common problem confronting the nation's colleges and universities is that of providing instruction in elementary computer programming.² The popularity of the computer science field, and the range of application of computers in everyday life means that the demand for people who know how to communicate with computers is growing rapidly. The solution to the problem is the computer itself. "Whatever the state of CAI with respect to other subjects, the computer is the ideal instrument for teaching its own use."³

W. R. SMITH and J. L. YOUNG, graduate students at the Naval Postgraduate School, presented a proposal for the use of computer Assisted Instruction at the Naval Postgraduate School (ref. 10). As this introduction has done, they created an awareness for the need of CAI, and they made specific recommendations to provide a balanced program for the entire community to emulate. In particular they recommended commencing student projects to probe the potentials of CAI

at the Naval Postgraduate School.

It was with these ideas about using the computer to teach computer programming and providing a CAI base at the Naval Postgraduate School that CAI-BASIC was undertaken.

C. OBJECTIVES

The objective of CAI-BASIC was to develop a CAI program to teach a computer programming language on the Naval Postgraduate School's time-sharing terminals. The programming language chosen was "BASIC" (Beginners All-purpose Symbolic Instruction Code), a computer language developed at Dartmouth College in the mid-1960's. "BASIC" was selected because of its simplicity yet fairly large range of application for the user who wants to take advantage of computer processing. It was felt that "BASIC" would provide the average non-computer oriented graduate student with satisfactory results in a minimal amount of study time.

With this objective in mind three sub-goals were determined to be essential for the CAI-BASIC project: to be able to interpret student responses, to be able to execute "BASIC" programs in order to give the student sufficient programming practice, and to be able to allow editing of "BASIC" programs.

II. DESCRIPTION OF CAI-BASIC

The CAI-BASIC program is written in FORTRAN IV, level G, and executes on IBM-2741 terminals while running under CP-67/CMS Time Sharing System on the Naval Postgraduate School's IBM-360/67 Computer System. The "BASIC" language implemented in CAI-BASIC is standard non-extended "BASIC" (refs. 3, 5, 10).

The CAI-BASIC program consists of two phases; an instruction phase, and an execution and editing phase. A detailed discussion of the use of CAI-BASIC is presented in APPENDIX A.

A. INSTRUCTION PHASE

The instruction phase presents fundamental concepts common to most programming languages: identifiers, variables, iteration, branching, sub-routines, built in functions, and recursion. The instruction set consists of seven lesson modules which, for reasons of coherency, are dependent upon each other. The underlying philosophy in preparing the lesson modules was that an important idea should be presented only after a need for it has clearly been established.⁴

Each lesson consists of instruction sequences followed by questions, evaluation of student responses, routing to the next sequence of instruction,

4. FENICHEL, OP. CIT., p. 142.

and a summary of the lesson followed by questions and/or problems to program. The student is allowed to progress through the lessons at his own speed, and allowed to review lessons or execute programs at the completion of each lesson.

Student responses are interpreted by one of two methods depending upon the type of question asked. When the question is of the true-false, multiple choice or give the answer type then the response is compared with a pre-stored result. When the student is asked to reply with a "BASIC" statement or to write a "BASIC" program, the CAI-BASIC compiler interprets the "BASIC" statements for syntactic correctness. When the student writes a program he can compare his answer with a pre-stored result, and if the answer is wrong the student is shown a solution program.

B. EXECUTION PHASE

The heart of the execution phase is the "BASIC" compiler that is used at the Naval Postgraduate School's Computer Center to execute "BASIC" programs in a batch mode. This compiler, written in FORTRAN IV, level G, was modified from a batch processing compiler to a line-by-line interpreter and incorporated into the CAI-BASIC program, and called the CAI-BASIC COMPILER.

The CAI-BASIC COMPILER has an added feature to aid students in debugging programs on the terminal. The added feature is called a "DEBUG" function and it produces a list of numeric and alpha-numeric data that were put into the program; and, in addition it produces a trace of all simple variables as they are assigned values during program execution.

At the completion of program execution or when an execution error occurs, the student has an option to enter the CAI-BASIC Edit mode to correct his program one line at a time. When all editing is completed the program is executed again.

III. LIMITATIONS AND EXTENSIONS

The major limitation of CAI-BASIC is the absence of any supervision over the student's progress as he proceeds through the instruction phase. A possible extension to this project would be to add a supervisory routine to maintain the student's progress and to keep a record of his errors. Thus, having the student's progress level and error record, CAI-BASIC could be tailored to instruct the student at his own learning level. In other words, CAI-BASIC could be made into a more completely interactive teaching program (refs. 1, 4).

An additional feature that would aid the student interaction is a communication link between the student and a professor so that student questions can be answered. R. R. FENICHEL (refs. 1, 2) described how students enter a special mode to type questions during the instruction session on the terminal. Then at the beginning of the student's next instruction session, all of his previous questions are answered on the terminal. FENICHEL refers to this as the "mailbox" system. Students type questions for the "mailbox" and the professor replies with answers or pertinent information for the "mailbox."

Another limitation to the existing CAI-BASIC program is the inability of CAI-BASIC to monitor the student when he enters the execution phase to write programs. The CAI-BASIC system does not oversee the student, beyond checking for syntax errors in his program. There is no method of inspecting his

programs from a tutorial point of view in order to help with semantic programming errors.

A foreseeable development to bring CAI-BASIC into the Artificial Intelligence field would be to make CAI-BASIC an "intelligent" tutor. This would remove the present inflexibility of interpreting student responses with pre-stored answers and open the possibility of CAI-BASIC understanding the logic of student responses and student programs.

IV. CONCLUSION

As stated in the objectives, the goal of CAI-BASIC was to develop a CAI program to teach a computer programming language on the Naval Post-graduate School's terminal system. The technical aim of completing the project and bringing it to an operating level has been met. However, an evaluation of the practicality of the project is still in the speculative stage.

Several computer and non-computer oriented students have tried CAI-BASIC and they found it to be both understandable and beneficial, but a full scale evaluation of the effectiveness of CAI-BASIC as a teaching tool is not possible from this limited sampling. It is sufficient to say that initial indications are that CAI-BASIC can provide a satisfactory means of learning a simple but capable programming language in a minimal amount of time. The student's participation in the learning experience encourages him to teach himself and to practice new programming skills. It is hoped that future use of CAI-BASIC by students will demonstrate its practicality.

Although the scope of CAI-BASIC was not particularly broad, the results obtained provide a basis for future CAI projects. The foundation has been laid, and the limitations and extensions of the previous section suggest a direction for future CAI efforts. Many previous CAI projects have suffered from too many or too large a scope of objectives, and as a result they never realize any practical results. This project has met its objectives and, hopefully, future CAI projects will benefit from its results.

APPENDIX A

In its present configuration the CAI-BASIC program occupies approximately ten cylinders of private disk space and requires an overlaying routine to execute under the control of CP-67/CMS which limits users to a 175K virtual machine. The overlaying routine, written by a Naval Postgraduate School Computer Center system programmer, initially loads only lesson 1 when CAI-BASIC is loaded into core. When any lesson other than lesson 1 is used, it is overlaid onto lesson 1.

The overlaying routine allows students to log on to CP-67/CMS as general users and to link into CAI-BASIC. This allows CAI-BASIC to be available to all of the terminal stations. The user gains access to CAI-BASIC by logging on the terminal as follows:

```
login yyyygxx      (xx is the terminal nr.)
                   (yyyy is your user nr.)
ENTER PASSWORD
npg
ENTER 4-DIGIT PROJECT NUMBER.... ETC.
0623cs04
READY AT (TIME) ON (DATE)
CP
link 0909p 191 192
ENTER PASSWORD
teach
SET TO READ ONLY
1 cms
CMS.. VERSION 01/21/71
login 192 t,p
**T (192) READ ONLY**
teach
```

Small print is typed in by the user, and the capitalized print is the computer terminal response.

The CAI-BASIC program consists of two phases, an instruction phase and an execution and editing phase. After logging on to the system, the user enters the main routine, CAIBAS, which directs the general flow of CAI-BASIC.

If the user has not used CAI-BASIC before he enters the instruction phase, he is presented with an introduction to CAI-BASIC, and then is sequentially guided through the lessons. After each lesson the user is given the opportunity to terminate his session, to review a lesson, to enter the execution phase, or to go on to the next lesson.

If the user has used CAI-BASIC before, he is given the opportunity to review any lesson or to go to the next lesson in his learning sequence.

When the execution and editing routine, TEST1, is entered the user is allowed to execute standard "BASIC" programs (refs. 3,5,10). The Test1 routine incorporates the "BASIC" compiler, COMPLR, which interprets each "BASIC" input statement. Each "BASIC" statement is input one line at a time; and, if a syntax error occurs on the input, COMPLR prints an error message. The user can then input the correct "BASIC" statement. When the "end" statement is input, the program is checked for global errors; and, if none occur, the program is executed.

When global errors or execution errors occur, the user is given the choice of entering the edit mode of TEST1 to correct his program, or using the "DEBUG" feature to find his programming errors.

The edit mode allows the user to delete, add to, or correct "BASIC"

statements in his program one line at a time. The user is given a listing of his program with reference numbers for editing purposes. To edit a program the user is first asked for the statement reference number, and then asked for the specific edit command.

A statement is deleted by typing in the reference number of the statement to be deleted, hitting the carriage return, and then typing in the command "DEL. "

A statement is added 'after' the reference number typed in by typing in the command "ADD1" followed by the "BASIC" statement to be added. To add a statement before the first statement in the program, the reference number zero (0) is used.

A statement is corrected by typing in the reference number of the statement to be corrected, hitting carriage return, and then typing in the 'entire' correct "BASIC" statement.

The "DEBUG" feature is designed to provide useful information to the user who has encountered an execution error in his program. It is used by adding the key word "DEBUG" as a statement in the user's program.

The "DEBUG" feature gives the user a list of all numeric and alpha-numeric data that were used in the program; and, in addition, it produces a trace of all simple variables with their values as they are assigned values during program execution.

APPENDIX B

CAI-BASIC : A PROGRAM TO TEACH THE PROGRAMMING LANGUAGE "BASIC"

T.A. BARRY

U.S.NPS. 8/17/71

THE FILES USED IN CAI-BASIC UNDER CP-67/CMS ARE AS FOLLOWS :

MAIN PROGRAM----- CAIBAS

SUBROUTINES-----INITIAL

* OF THE PROGRAM STATEMENT AT A TIME, DELETE, CR CORRECT ONE LINE
* INPUT THE PROGRAM STATEMENT REFERENCE NUMBER AND HIT THE CARRIAGE
* RETURN. THE SECOND STEP DEPENDS ON WHAT EDITING YOU DO :
* 1. DELETE
* THE BASIC STATEMENT REFERENCED IS DELETED BY TYPING THE
* LETTERS
* 2. CORRECT
* TO CORRECT THE BASIC STATEMENT REFERENCED TYPE IN THE COMPLETE
* CORRECT BASIC STATEMENT.
* 3. ADD
* A BASIC STATEMENT IS ADDED AFTER THE BASIC STATEMENT
* REFERENCED BY TYPING THE LETTERS ADD1 FOLLOWED BY THE BASIC
* STATEMENT. ALL BLANKS FOLLOWING THE LETTERS ADD1 WILL BE
* INCLUDED IN THE BASIC STATEMENT. TO PLACE A STATEMENT BEFORE
* THE FIRST STATEMENT IN THE PROGRAM, USE THE REFERENCE NUMBER
* 0. )
OLD=1

APPENDIX C

13.13.46 START
EXECUTION BEGINS...

HI , WELCOME TO CAI-BASIC . THERE ARE ONLY A FEW
SIMPLE RULES TO REMEMBER IN ORDER TO HAVE A SUCCESSFUL SESSION
ON THE TERMINAL WITH CAI-BASIC :

1. WHEN ASKED FOR A RESPONSE , TYPE IN THE CORRECT REPLY AND
HIT THE CARRIAGE RETURN KEY ON THE RIGHT SIDE OF THE KEYBOARD.

2. IF YOU MAKE A TYPING ERROR WHILE MAKING ANY RESPONSE
OR INPUT , TYPE IN FOUR DOLLAR SIGNS (\$\$\$\$) AFTER THE ERROR OR
ANYWHERE ON THAT INPUT LINE AND HIT CARRIAGE RETURN .THE
ENTIRE LINE WILL THEN BE IGNORED AND YOU CAN TYPE IN THE CORRECT
INPUT OR RESPONSE .

3. IF AT ANY POINT IN THE SESSION YOU WANT TO STOP THE SESSION
TYPE IN THE WORD 'QUIT' AS SOON AS YOU ARE ASKED FOR THE NEXT
RESPONSE ,HIT CARRIAGE RETURN,THEN HIT ATTN KEY AND TYPE LOGOUT .

4. DURING YOUR TERMINAL SESSION CAI-BASIC WILL HALT OCCASIONALLY
TO LET YOU READ A SEQUENCE OF INFORMATION . WHEN YOU ARE
READY TO CONTINUE , TYPE IN 'GO' , AND HIT CARRIAGE RETURN

5. DURING YOUR TERMINAL SESSION YOU MAY NOTICE THAT
THE TYPING IS NOT ALWAYS PERFECT . SOME DAYS THE COMPUTER IS
NOT UP TO PAR AND YOU WILL HAVE TO ADJUST TO THE MINOR IRRITANT

IF YOU ONLY WANT TO EXECUTE PROGRAMS AT THIS TIME THEN
REPLY : YES ; OTHERWISE REPLY : NO .

no

IF THIS IS YOUR FIRST SESSION WITH CAIBASIC, THEN
REPLY: YES ;OTHERWISE REPLY: NO .

yes

CAIBASIC IS A PROGRAM TO TEACH YOU THE
FUNDAMENTALS OF A PROGRAMMING LANGUAGE.THE LANGUAGE TO BE LEARNED
IS BASIC ; A SIMPLE LANGUAGE FOR THE USER WHO HAS LITTLE
KNOWLEDGE OF COMPUTERS AND WHOSE PRIMARY INTEREST IS IN OBTAINING
RESULTS.

THE SIMPLICITY OF THE BASIC LANGUAGE AND ITS RANGE
OF CAPABILITIES SHOULD ALLOW YOU TO LEARN THE LANGUAGE AND

WRITE PROGRAMS IN A MINIMAL AMOUNT OF TIME.

THE REFERENCE TEXTS RECOMMENDED FOR CAIBASIC ARE :

1. BASIC LANGUAGE MANUAL , TN # 0211-12 APRIL 1971
(FREE UPON REQUEST IN 1-247)

2. INTRODUCTION TO COMPUTING THROUGH THE BASIC LANGUAGE , R.L. NOLAN
(BOOKSTORE / MAIN LIBRARY)

3. BASIC PROGRAMMING , V.C. HARE
(COMPUTER CENTER LIBRARY)

*** AFTER YOU HAVE FINISHED READING AN INPUT , TYPE IN GO AND HIT THE RETURN
AND THE PROGRAM WILL CONTINUE ***

80

DURING YOUR TERMINAL SESSION YOU WILL BE LEARNING
THE STRUCTURE OF THE LANGUAGE BASIC. THE INSTRUCTION SET
CONTAINS 7 LESSONS AND YOU MAY PROCEED THROUGH THE LESSONS AT
YOUR OWN SPEED.

THE LESSONS ARE AS FOLLOWS :

LESSON 1 PROGRAM FORMAT AND BASIC DEFINITIONS
LESSON 2 REMARKS, INPUT/OUTPUT AND DATA
LESSON 3 ASSIGNMENT STATEMENTS AND BUILT IN FUNCTIONS
LESSON 4 BRANCHING
LESSON 5 LOOPING AND SUBSCRIPTED VARIABLES
LESSON 6 SUBROUTINES AND RECURSION
LESSON 7 SUMMARY OF BASIC STATEMENTS

** WHEN YOU ARE READY TO CONTINUE , TYPE IN GO AND HIT
THE CARRIAGE RETURN ***

80

IN EACH LESSON YOU WILL BE GIVEN INSTRUCTION
SEQUENCES AND THEN YOU WILL BE ASKED QUESTIONS TO SEE IF YOU
UNDERSTOOD THE INSTRUCTIONS. THE QUESTIONS WILL BE OF VARIOUS
TYPES: MULTIPLE CHOICE, TRUE/FALSE, ACTUAL PROGRAM STATEMENTS, ETC.
YOU WILL BE PROMPTED FOR YOUR ANSWER, AND WHEN READY TYPE IN
OUR RESPONSE AND HIT THE RETURN KEY.

IF YOU KEEP THE TELETYPE OUTPUT FROM YOUR TERMINAL SESSION
YOU WILL HAVE A READY REFERENCE FOR FUTURE USE

80

*** LESSON 1. ***

THIS INSTRUCTION SET WILL INTRODUCE YOU TO THE STRUCTURE OF BASIC LANGUAGE STATEMENTS , THE RULES FOR VARIABLES AND NUMBERS , AND THE SYMBOLS FOR ARITHMETIC OPERATIONS.

***DONT FORGET TO TYPE GO AND HIT RETURN WHEN READY TO CONTINUE . ***

80

A. PROGRAM STRUCTURE

THE BASIC LANGUAGE , AND ALL OTHER LANGUAGES , HAS A SPECIFIED STRUCTURE . EACH BASIC STATEMENT HAS A REQUIRED FORM WITH POSSIBLY ONE OR MORE VARIATIONS. THE FOLLOWING EXAMPLE WILL ILLUSTRATE SOME SIMPLE BASIC STATEMENTS IN THE PROPER PROGRAM STRUCTURE

```
REM PROGRAM TO COMPUTE GAS MILAGE
REM M=MILES TRAVELED , G=GAS USED
READ M,G
LET T=M / G
PRINT 'MILES TRAVELED','GAS USED',' MILES/GAL'
PRINT M,G,T
DATA 500,25
END
```

OUTPUT PRODUCED IS :

MILES TRAVELED	GAS USED	MILES/GAL
500	25	20

80

AS YOU CAN SEE FROM THE ABOVE SAMPLE, THE PROGRAM STRUCTURE CONSISTS OF BASIC LANGUAGE STATEMENTS FOLLOWED BY AN END STATEMENT . THE WORDS : REM , READ, LET , PRINT , DATA AND END ARE KEY WORDS THAT MAKE UP A BASIC STATEMENT .

80

MOST OF THE KEY WORDS USED IN THE BASIC STATEMENTS ARE SELF-EXPLANATORY:

```
REM  ALLOWS REMARKS/COMMENTS
READ M,G  ASSIGNS NUMBERS IN THE DATA STATEMENT TO THE
           VARIABLES M AND G
LET  ASSIGNS THE RESULT OF M DIVIDED BY G INTO VARIABLE T
```

PRINT 'STRING' CAUSES THE STRING IN SINGLE QUOTES TO BE
PRINTED LITERALLY
PRINT M,G,T PRINTS THE CURRENT VALUE OF THE VARIABLES M,G,T
END TELLS THE COMPUTER THAT THE INPUT PROGRAM IS TO BE
EXECUTED

80

IF AT THIS POINT YOU WOULD LIKE TO RUN THE
SAMPLE PROGRAM TO GAIN SOME CONFIDENCE IN THE COMPUTER AND ITS
ABILITY TO PROVIDE SPEEDY RESULTS, THEN REPLY : YES ; OTHER-
WISE REPLY : NO AND THE INSTRUCTION WILL CONTINUE .

no

B. PROGRAM FORMAT

A BASIC PROGRAM CONSISTS OF A SEQUENCE OF BASIC STATEMENTS , ONE
STATEMENT PER INPUT LINE , FOLLOWED BY AN END STATEMENT .
BECAUSE NO BASIC STATEMENT MAY BE LONGER THAN ONE INPUT LINE (80 SPACES) ,
THERE IS NO PROVISION FOR CONTINUING STATEMENTS FROM ONE LINE
TO THE NEXT . HOWEVER ; YOU MAY SPACE THE INPUT LINE
AS DESIRED FOR READABILITY SINCE THE COMPUTER IGNORES BLANKS IN BASIC .

80

1. STATEMENT NUMBERS

EACH BASIC STATEMENT MAY HAVE AN OPTIONAL
STATEMENT NUMBER PRECEDING IT FOR IDENTIFICATION PURPOSES .
THIS STATEMENT NUMBER MUST BE AN INTEGER BETWEEN 1 -> 9999
FOR EXAMPLE : 12 READ M,G

2. KEY WORDS

THE KEY WORDS THAT MAKE UP A BASIC STATEMENT (REM , READ , LET , ETC ,)
ARE SPECIAL TERMINAL SYMBOLS THAT ARE RECOGNIZED BY THE COMPUTER
AND FOR THIS REASON THEY MUST BE SPELLED CORRECTLY AND ONLY
USED IN BASIC STATEMENTS .

THE END STATEMENT INDICATES THAT THE INPUT PROGRAM IS
COMPLETED AND THAT PROGRAM EXECUTION IS TO BEGIN . THE 'END'
STATEMENT IS ALWAYS THE LAST STATEMENT IN A PROGRAM .

80

YOU WILL NOW BE ASKED A FEW SIMPLE QUESTIONS ABOUT
WHAT YOU HAVE JUST LEARNED .

1.) IS THIS A LEGAL BASIC PROGRAM(REPLY : YES OR NO)??

REM ONE LINE DO NOTHING PROGRAM
END

yes

YES , THE SIMPLEST BASIC PROGRAM CONSISTS OF JUST AN 'END' STATEMENT.

2.) WHICH OF THE FOLLOWING BASIC STATEMENTS IS
IN THE PROPER FORMAT :

- A.) 15 LET T=M/G
- B.) 15LETT=M/G
- C.) 15 L E T T = M / G

REPLY A , d , C OR ALL .

all

ALL OF THE ABOVE BASIC STATEMENTS ARE CORRECT BECAUSE
SPACES ARE DISREGARDED . NOTE THAT STATEMENT B.) , ALTHOUGH
CORRECT IS CONFUSING TO READ . BLANKS AND INDENTATIONS MAKE A
PROGRAM EASY TO READ .

C. ALPHA-NUMERIC CHARACTERS

ALPHA-NUMERIC CHARACTERS ARE THE LEGAL CHARACTERS , DIGITS , AND
SPECIAL CHARACTERS THAT CAN BE USED IN BASIC .

1. CHARACTERS

CHARACTERS CONSIST OF THE LETTERS IN THE ALPHABET A-->Z

2. DIGITS

DIGITS ARE THE SINGLE NUMBERS 0-->9

3. SPECIAL CHARACTERS

THE SPECIAL CHARACTERS ARE * * * / * - () = ' , \$

4. STRING

A STRING IS ANY LIST OF ALPHA-NUMERIC CHARACTERS
ENCLOSED IN 'SINGLE' QUOTES . FOR EXAMPLE :
'THIS IS A STRING'

so

D. VARIABLES

IN BASIC THERE ARE THREE TYPES OF VARIABLES : SIMPLE , ALPHA AND SUBSCRIPTED . SUBSCRIPTED VARIABLES WILL BE COVERED IN LESSON 5 .

1. SIMPLE VARIABLES

SIMPLE VARIABLES ARE IDENTIFIED BY A SINGLE LETTER OR A SINGLE LETTER FOLLOWED BY A DIGIT BETWEEN 0-9 .

FOR EXAMPLE : A , A3 , Z0 , AND X ARE LEGAL VARIABLES ; BUT A26 , 9Z , ABC , AND X1Y ARE ILLEGAL VARIABLES . THEREFORE ; YOU HAVE 286 SIMPLE VARIABLES FOR USE IN YOUR PROGRAMS.

80

2. ALPHA VARIABLES

ALPHA VARIABLES ARE USED FOR ALPHA-NUMERIC MANIPULATIONS IN WHICH A GROUP OF ALPHA-NUMERIC CHARACTERS , CALLED A STRING , ARE REPRESENTED BY AN ALPHA VARIABLE . THE ALPHA VARIABLE CONSISTS OF A SINGLE LETTER FOLLOWED BY A DOLLAR SIGN , \$. THE MAXIMUM LENGTH OF THE ALPHA-NUMERIC STRING ASSIGNED TO THE ALPHA VARIABLE IS 16 CHARACTERS.

FOR EXAMPLE : A\$, X\$, Z\$ ARE LEGAL ALPHA VARIABLES. A SIMPLE USE OF ALPHA VARIABLES FOLLOWS :

```
READ A$,B$
PRINT A$,B$
DATA 'MONDAY','21 JUNE'
END
```

THIS PROGRAM WILL PRODUCE THE OUTPUT :

MONDAY 21 JUNE

80

E. NUMBERS

NUMBERS MAY BE EXPRESSED AS INTEGERS OR AS REALS ,AND A NUMBER WHETHER INTEGER OR REAL IS LIMITED TO 9 DIGITS , NOT INCLUDING DECIMAL POINT. A NUMBER IS ASSUMED POSITIVE UNLESS IT IS PRECEDED BY A - SIGN .

1. INTEGERS

INTEGERS ARE NUMBERS WITH NO FRACTIONAL PART ,IE. 3 , 15

2. REALS

REAL (FIXED-POINT) NUMBERS HAVE A DECIMAL POINT AND A FRACTIONAL PART , IE. 3.0 , 15.31, 729.1 , 0.0

GO

F. EXPRESSIONS

AN EXPRESSION MAY BE A SINGLE CONSTANT OR VARIABLE , OR AN ARITHMETIC EXPRESSION . ARITHMETIC EXPRESSIONS ARE FORMED BY USING OPERATORS AND PARENTHESIS .

1. OPERATORS

NUMBERS AND SIMPLE VARIABLES MAY BE COMBINED INTO ARITHMETIC EXPRESSIONS BY USING ONE OR MORE OF THE ARITHMETIC OPERATORS :

- EXPONENTIATION
- MULTIPLICATION
- / DIVISION
- + ADDITION
- SUBTRACTION

IN WRITING AN EXPRESSION , EACH ARITHMETIC OPERATION MUST BE SHOWN. NO TWO OPERATIONS MAY BE ADJACENT , NOR MAY TWO NUMBERS OR VARIABLES BE ADJACENT IN AN EXPRESSION.
FOR EXAMPLE: 2×2 , A/B , $B+C$, $X \times Z$, AND $Y-3.0$ ARE LEGAL EXPRESSIONS.

GO

2. PARENTHESIS

PARENTHESIS MAY BE USED TO GROUP EXPRESSIONS AND TO CONTROL THE ORDER IN WHICH AN ARITHMETIC EXPRESSION IS EVALUATED . THE NORMAL HIERARCHY OF OPERATORS IS :

1. ••
2. • AND /
3. + AND -

IF PARENTHESIS ARE USED , THE EXPRESSION WITHIN A PARENTHESIS PAIR IS EVALUATED FIRST . PARENTHESIS IN EXPRESSIONS MUST ALWAYS OCCUR IN PAIRS , IE. $5 \times (4 + 3)$, $(5 \times (4+3))$ ARE EQUIVALENT EXPRESSIONS HAVING THE VALUE 35 .

OPERATIONS ARE EVALUATED ACCORDING TO THE OPERATORS HIERARCHY IF TWO OPERATORS OF THE SAME HIERARCHY OCCUR IN AN EXPRESSION EVALUATION IS FROM LEFT TO RIGHT .
FOR EXAMPLE: $2 \times 4 + 6/3$

IN THIS EXPRESSION 2×4 WILL BE EVALUATED FIRST , THEN $6/3$, AND THEN THE TWO RESULTS WILL BE ADDED .

80

YOU WILL NOW BE ASKED A FEW SIMPLE QUESTIONS ABOUT
WHAT YOU HAVE JUST LEARNED .

1.) $4 + 6 / 2$ HAS THE VALUE (REPLY WITH VALUE)

5

YOUR ANSWER IS INCORRECT . THE EXPRESSION IS EVALUATED AS FOLLOWS :

$4 + 6 / 2 \rightarrow 4 + 3 \rightarrow 7$

2.) $(4 + 6) / 2$ HAS THE VALUE (REPLY WITH VALUE)

5

3.) $((4 + 6) / 2) * 2$ HAS THE VALUE (REPLY : VALUE)

25

F. SUMMARY

THIS CONCLUDES THE INSTRUCTION SET FOR LESSON 1.
YOU WILL NOW BE GIVEN A SAMPLE BASIC PROGRAM AND ASKED TO FIND
THE MISTAKES IN IT , CONCERNING WHAT YOU HAVE LEARNED IN THIS
LESSON :

```
1 REM REVIEW PROGRAM
2 READ A1,B2,Z1,$Y
3 LET A1=B2(A1+Z1)
4 LET B2=((A1+3)+Z1**2)
5 LET Z1=3.141592763
6 PRINT 1A,B2,Z1
7 DATA 5.0,3,3.1416,'FINI'
```

AFTER LOOKING AT THE SAMPLE PROGRAM , YOU WILL BE ASKED QUESTIONS
ABOUT EACH STATEMENT ,

80

1.) LINE 2 CONTAINS A READ STATEMENT FOLLOWED
BY A LIST OF VARIABLES . ANY ERRORS (REPLY: YES OR NO)?

yes

INPUT CORRECTION TO THE INCORRECT VARIABLE ONLY .

yes

2.) LINE 3 CONTAINS A LET STATEMENT FOLLOWED
BY A1 = EXPRESSION . ANY ERRORS (REPLY : YES OR NO) ?

yes

INPUT CORRECTION TO ILLEGAL EXPRESSION ; EVERYTHING
AFTER = SIGN .

b2*(a1+z1)

3.) LINE 4 IS SIMILAR TO LINE 3 . ANY ERRORS
REPLY YES OR NO) ?

no

4.) LINE 5 CONTAINS A LET STATEMENT FOLLOWED
BY A NUMBER . ANY ERRORS (REPLY : YES OR NO) ?

no

THE NUMBER CONTAINS 10 DIGITS AND THE MAXIMUM ALLOWED
IS 9 DIGITS.

5.) LINE 6 CONTAINS A PRINT STATEMENT FOLLOWED
BY A LIST OF VARIABLES . ANY ERRORS (REPLY : YES OR NO)?

yes

INPUT CORRECTION TO THE INCORRECT VARIABLE ONLY .

a1

THERE ARE NO ERRORS IN LINE 7 . IS THE PROGRAM
READY TO EXECUTE (ASSUMING ABOVE ERRORS CORRECTED)
(REPLY : YES OR NO)

yes

THE PROGRAM FORMAT REQUIRES THAT AN END STATEMENT

BE THE LAST STATEMENT OF THE PROGRAM . THUS THIS SAMPLE PROGRAM
WOULD NOT EXECUTE .

THIS CONCLUDES THE REVIEW QUESTIONS
FROM LESSON 1 .

DO YOU WANT TO TERMINATE YOUR INSTRUCTION SESSION ?
(REPLY : YES OR NO)

no

IF YOU WANT TO EXECUTE PROGRAMS AT THIS TIME
THEN REPLY : YES ; OTHERWISE REPLY : NO AND THE INSTRUCTION
WILL CONTINUE .

no

EXECUTION BEGINS...

*** LESSON 2. ***

THIS INSTRUCTION SEQUENCE WILL INTRODUCE YOU TO THE BASIC LANGUAGE STATEMENTS REM, PRINT, READ, AND DATA. USING THESE STATEMENTS YOU WILL BE ABLE TO CONSTRUCT AND EXECUTE ELEMENTARY PROGRAMS. THE FORM FOR EACH BASIC STATEMENT WILL INCLUDE:

'KEY WORD' << ELEMENTS OR LIST OF ELEMENTS SEPARATED BY COMMAS >>

THE CARET SYMBOLS '<< >>' DELINEATE THE LEGAL ITEMS THAT MAY FOLLOW THE KEYWORD AND MAKE UP THE BASIC STATEMENT.

80

A. REM

THE BASIC STATEMENT WHICH ALLOWS YOU TO INSERT REMARKS INTO YOUR PROGRAM IS IDENTIFIED BY THE KEY WORD 'REM'. REM IS A NON-EXECUTING STATEMENT WHICH MAY BE USED OPTIONALLY AT ANY PLACE IN YOUR PROGRAM TO INTRODUCE A PROGRAM NAME, TO EXPLAIN VARIABLES, TO DOCUMENT YOUR PROGRAM, ETC.

80

THE FORM FOR THE REM STATEMENT IS:

REM << ANY SEQUENCE OF ALPHA-NUMERIC CHARACTERS >>

THE REM STATEMENT IS IGNORED BY THE CAIBASIC COMPILER, AND IS ONLY FOR YOUR INFORMATION. FOR EXAMPLE:

REM PROGRAM TO COMPUTE INCOME TAX

80

B. PRINT

THE PRINT STATEMENT IS THE METHOD OF WRITING OUT THE RESULTS OF THE BASIC PROGRAM, TO DISPLAY VALUES OF VARIABLES, TO LABEL STATEMENT IS:

PRINT << EXPRESSION OR 'STRING',...,EXPRESSION OR 'STRING' >>

MULTIPLE ELEMENTS IN THE PRINT LIST ARE SEPARATED BY COMMAS.

80

1. PRINT << EXPRESSION >> WILL WRITE OUT THE CURRENT VALUE OF THE EXPRESSION, WHERE AN EXPRESSION AS DEFINED IN LESSON 1 WAS A NUMBER, A VARIABLE, OR AN ARITHMETIC

EXPRESSION THAT IS TO BE EVALUATED .

FOR EXAMPLE :

PRINT 1,A,B1,5**2

ASSUMING THAT A=10.0 , B=13.3 WOULD PRINT :

1	10.0	13.3	25
---	------	------	----

80

2. PRINT <<'STRING' >> WILL PRINT OUT ALL THE ALPHA-NUMERIC CHARACTERS OF THE STRING WITHIN 'SINGLE' QUOTES. THIS FORM IS USED FOR LABELING THE COMPUTER OUTPUT.

FOR EXAMPLE : PRINT 'THE ANSWER IS :'

PRODUCES THE RESULT :

THE ANSWER IS :

3. PRINT BY ITSELF IS USED TO SKIP A LINE ON THE COMPUTER OUTPUT .

80

THE COMPUTER OUTPUT SHEET IS DIVIDED INTO 8 ZONES EACH 15 COLUMNS WIDE . PRINT ZONES CAN BE SKIPPED BY PUTTING A BLANK IN THE PRINT LIST . FOR EXAMPLE :

PRINT A, B, ,X
OUTPUTS THE VALUE OF A IN THE FIRST ZONE , B IN THE SECOND , SKIPS THE THIRD ZONE , AND PUTS X IN THE FOURTH ZONE .

ALPHA VARIABLES AND 'STRINGS' MAY EXTEND OVER SEVERAL ZONES , BUT NUMERIC RESULTS ARE LEFT ADJUSTED IN THE SPECIFIED ZONE . IF MORE THAN EIGHT ITEMS OCCUR IN THE PRINT LIST , THE ITEMS WILL OVERFLOW AND BE PRINTED ON THE NEXT LINE .

80

USING THE PRINT AND END STATEMENT YOU NOW HAVE THE FACILITY TO EXECUTE YOUR FIRST PROGRAMS . FOR EXAMPLE :

```
REM PROGRAM TO COMPUTE THE SQUARE OF A NUMBER
PRINT'S SQUARED =' ,5**2
END
```

PRODUCES THE RESULT :

5 SQUARED = 25

YOU WILL NOW BE GIVEN TWO PROBLEMS TO SOLVE . YOU WILL ENTER

THE EXECUTION PHASE OF CAIBASIC WHERE YOU CAN RUN YOUR PROBLEMS AND THEN YOU WILL RETURN TO FINISH THE LESSON.

1) FIND THE SQUARE ROOT OF 5 SQUARED MINUS 4 TIMES 2 TIMES 2 .

2) FIND THE VALUE OF $3.1416(B \text{ CUBED})H/12$
WHERE $B=2.50$, $H=3.03$.

IF YOU WISH TO SKIP THESE PROBLEMS REPLY : YES
AND THE LESSON WILL CONTINUE.

yes

C. READ

THE READ STATEMENT IS THE METHOD WHICH PROVIDES INPUT TO THE PROGRAM . THE FORM OF THE READ STATEMENT IS :

READ << VARIABLE,.....,VARIABLE >>

FOR EVERY VARIABLE IN THE READ LIST THERE MUST BE A CORRESPONDING ELEMENT IN A DATA STATEMENT . THE READ AND DATA STATEMENTS ARE USED TOGETHER TO ASSIGN INPUT VALUES TO PROGRAM VARIABLES.

WHEN THE READ STATEMENT IS EXECUTED , EACH VARIABLE IS ASSIGNED SUCCESSIVE NUMBERS FROM A STACK OF NUMERIC DATA OR SUCCESSIVE 'STRINGS' FROM A STACK OF ALPHA-NUMERIC DATA. AS EACH VARIABLE IS READ , IT TAKES THE TOP ELEMENT OF THE APPROPRIATE DATA STACK .

80

D. DATA

THE DATA STATEMENT IS A LIST OF INPUT NUMBERS OR 'STRINGS' THAT WILL BE ASSIGNED TO VARIABLES IN A READ STATEMENT . THE FORM OF THE DATA STATEMENT IS :

DATA << NUMBER OR 'STRING',....., NUMBER OR 'STRING' >>

THE 'STRING' OF ALPHA-NUMERIC CHARACTERS MUST BE ENCLOSED IN SINGLE QUOTES .

DATA STATEMENTS MAY BE PLACED ANYWHERE IN A PROGRAM , BUT THERE IS AN UPPER LIMIT OF 500 NUMERIC AND 500 ALPHA-NUMERIC DATA ELEMENTS FOR EACH PROGRAM .

80

WHEN THE FIRST DATA STATEMENT IS INTERPRETED BY THE CAIBASIC COMPILER A FIRST IN , FIRST OUT STACK IS FORMED FOR NUMERIC AND ALPHA-NUMERIC DATA . AS EACH NUMBER OR STRING IN A DATA LIST IS INTERPRETED , IT IS PLACED ON THE BOTTOM OF ITS RESPECTIVE DATA STACK . AS OTHER DATA STATEMENTS ARE LOCATED IN THE PROGRAM ITS ELEMENTS ARE PLACED ON THE BOTTOM OF THE PROPER STACK .

1.) EXAMPLE :

```
DATA 10.0,13.33,'J.E.SMITH',18
DATA 'Z.X. DOE',19
```

PRODUCES THE FOLLOWING DATA STACKS :

NUMERIC	ALPHA-NUMERIC
10.0	J.E.SMITH
13.33	Z.X. DOE
18	
19	

80

DURING EXECUTION OF READ STATEMENTS , AS THE VARIABLES IN THE READ LIST ARE ASSIGNED VALUES FROM THE TOP OF THE APPROPRIATE DATA STACK , THE DATA STACK IS DECREMENTED AND THE NEXT ELEMENT POPS UP .

2.) EXAMPLE :

```
READ A,B1,Z$
```

ASSUMING THAT THE DATA FROM EXAMPLE 1.) IS AVAILABLE , THE VARIABLES IN THE READ LIST ARE ASSIGNED VALUES AS FOLLOWS :

```
A <-- 10.0
B1 <-- 13.33
Z$ <-- J.E.SMITH
```

THE RESULTING DATA STACKS ARE AS FOLLOWS :

NUMERIC	ALPHA-NUMERIC
18	Z.X. DOE
19	

80

E. RESTORE , RESTORE\$

THE RESTORE , RESTORE\$ STATEMENTS ARE USED TO RETURN THE NUMERIC AND ALPHA-NUMERIC DATA STACKS TO THEIR ORIGINAL CONDITION SO

7.1
THAT THE DATA MAY BE USED AGAIN . THE FORM OF THE RESTORE STATEMENT
IS :

RESTORE (RESTORES NUMERIC DATA)

RESTORES (RESTORES ALPHA-NUMERIC DATA)

YOU WILL NOW BE ASKED SOME QUESTIONS ABOUT THE READ , DATA AND
RESTORE STATEMENTS :

CONSIDER THE FOLLOWING STATEMENTS AS PART OF A BASIC PROGRAM:

```
DATA 2,5,7,16,'ANS='  
DATA 'CORRECT',25,'WRONG',0.0  
READ A,B3,I$,C1,D  
READ J$,E4,K$,X
```

80

1.) WHAT IS THE VALUE OF C1 ?? REPLY WITH VALUE

7

NOW CONSIDER THAT THE FOLLOWING STATEMENTS
WERE ADDED TO THE ABOVE PROGRAM :

```
RESTORE  
READ Z4,A
```

2.) WHAT IS THE VALUE OF Z4 ?? REPLY WITH VALUE .

16

THE CORRECT ANSWER IS Z4=2 . THE RESTORE COMMAND
RETURNS THE NUMERIC DATA STACK TO ITS ORIGINAL CONDITION, AND
THE READ STATEMENT ASSIGNS VALUES FROM THE TOP OF THE DATA
STACK TO THE VARIABLES IN THE READ LIST AS FOLLOWS :

```
Z4 <-- 2  
A <-- 5
```

F. SUMMARY

NOW THAT YOU HAVE SEEN HOW READ AND DATA STATEMENTS WORK TOGETHER
TO INPUT VALUES INTO YOUR PROGRAM , AND HOW THE PRINT STATEMENT
IS USED TO OUTPUT AND LABEL RESULTS YOU HAVE THE FACILITY
TO WRITE SIMPLE PROGRAMS USING INPUT DATA .

FOR EXAMPLE

((8**2)**.5) COULD BE WRITTEN IN SYMBOLIC FORM AND THE DATA

COULD BE READ IN AS FOLLOWS:

```
READ A,B
PRINT'ANS=',(( A**B)**.5)
DATA 8,2
END
```

IN THE NEXT LESSON YOU WILL BE SHOWN HOW TO USE ASSIGNMENT STATEMENTS
THIS WILL GIVE YOU GREATER FLEXIBILITY IN WRITING EXPRESSIONS
AND WILL ALLOW YOU TO DO ASSIGNMENTS SUCH AS :

$A=B**2-4*A*C$, AND $Z=(A**2+3)/A$, THEN BY SAYING PRINT A,Z
THE RESULTS OF BOTH EXPRESSIONS WOULD BE DISPLAYED.

so

YOU WILL NOW BE GIVEN SOME REPRESENTATIVE PROBLEMS
TO GIVE YOU A CHANCE TO EXERCISE YOUR NEW PROGRAMMING TOOLS

1.) WRITE A PROGRAM TO SOLVE THE EQUATION $X**2+10Y-24$
WHERE THE INPUT DATA IS $X=10$, $Y=3$.

2.) WRITE A PROGRAM TO SOLVE THE QUADRATIC EQUATION

$(-B+(B**2-4*AC)**.5)/2A$
INPUT DATA IS $A=2$, $B=5$, $C=2$.

IF YOU WISH TO WRITE AND EXECUTE THESE PROGRAMS NOW , REPLY : YES
AND YOU WILL ENTER THE CAIBASIC COMPILER ; OTHERWISE REPLY : NO
AND YOU WILL GO ON TO THE NEXT LESSON .

no

IF YOU DECIDE TO RUN THESE PROBLEMS LATER THE ANSWERS
WILL NOW BE GIVEN SO YOU MAY CHECK YOUR RESULTS :

1.) 106
2.) -.500

DO YOU WANT TO TERMINATE YOUR INSTRUCTION SESSION ?
(REPLY : YES OR NO)

no

IF YOU WANT TO EXECUTE PROGRAMS AT THIS TIME
THEN REPLY : YES ; OTHERWISE REPLY : NO AND THE INSTRUCTION
WILL CONTINUE .

no

EXECUTION BEGINS...

*** LESSON 3. ***

THIS INSTRUCTION SET WILL INTRODUCE YOU TO ASSIGNMENT STATEMENTS AND BUILT-IN FUNCTIONS. THE LET STATEMENT AND THE 10 BUILT IN FUNCTION WILL ENABLE YOU TO EVALUATE AND ASSIGN VARIABLES TO COMPLEX ARITHMETIC EXPRESSIONS.

80

A. LET

THE LET STATEMENT IS AN ASSIGNMENT OR SUBSTITUTION COMMAND. IT CAUSES THE EVALUATION OF AN EXPRESSION TO BE SUBSTITUTED FOR THE CURRENT VALUE OF A VARIABLE. THE FORM OF THE LET STATEMENT IS:

LET << VARIABLE >> = << EXPRESSION >> OR
LET << VARIABLE >> = << VARIABLE >> = = << EXPRESSION >>

80

THERE MAY BE ANY NUMBER OF VARIABLE = VARIABLE IN THE FORM OF THE LET STATEMENT. AN EXPRESSION IS A NUMBER, VARIABLE, OR AN ARITHMETIC EXPRESSION.

WHEN THE LET STATEMENT IS EXECUTED THE EXPRESSION ON THE RIGHT SIDE OF THE EQUAL SIGN IS EVALUATED AND THE RESULTING VALUE IS ASSIGNED TO THE VARIABLE OR VARIABLES ON THE LEFT SIDE OF THE EQUAL SIGN. THE PREVIOUS VALUE ASSIGNED TO THE VARIABLE OR VARIABLES WILL BE LOST. FOR EXAMPLE:

LET A=12.3
LET B=14.4
LET A=B+25

THE VALUE OF THE VARIABLES A AND B IS NOW A=B= 25.

80

THE ONLY RESTRICTION ON THE USE OF VARIABLES IS THAT SIMPLE AND SUBSCRIPTED VARIABLES CAN ONLY BE ASSIGNED NUMERIC VALUES, AND ALPHA VARIABLES CAN ONLY BE ASSIGNED ALPHA-NUMERIC STRINGS. FOR EXAMPLE:

LET A=D4-X(5)=(3**2 - 6)/4
LET A\$=X\$='HELP'

```

      LET Y=(B - 4*A*C)**.5
      LET US='ANSWER ='
THE FOLLOWING ASSIGNMENT IS ILLEGAL :

```

```

      LET A=D$(3+4)

```

80

YOU WILL NOW BE ASKED QUESTIONS CONCERNING
WHAT YOU HAVE JUST LEARNED :

1.) REPLY WITH VALUE OF X IN BELOW PROGRAM .

```

LET A=4
LET B=6
LET C=3
LET X=A**2 - 4*B + 3*C
PRINT'ANSWER =' ,X
END

```

1

2.) REPLY WITH VALUE OF Z IN BELOW PROGRAM .

```

DATA 1,2,3,4,6
DATA'RIGHT ON',7,8
READ A,B,X
READ G$,Y,C,D
LET Z=X*Y
END

```

6

YOUR RESPONSE WAS INCORRECT . THE VARIABLES ARE
ASSIGNED VALUES AS FOLLOWS :

NUMERIC	ALPHA
A<-- 1	Y\$<-- RIGHT ON
B<-- 2	
X<-- 3	
Y<-- 4	
C<-- 6	
D<-- 7	

Z <-- X*Y ; Z <-- 7

3.) LET R= A*B/C-D
WHICH FORMULA DOES THIS STATEMENT REPRESENT ?

R
 EPLY WITH CORRECT LETTER
 A.) $R = (A+B)/(C-D)$
 B.) $R = A \cdot (B/C) - D$

b

8. BUILT-IN FUNCTIONS
 BUILT-IN FUNCTIONS ARE COMMONLY USED PROGRAMS ALREADY WRITTEN
 AND STORED IN THE CAIBASIC COMPILER FOR YOUR USE . THERE ARE
 FUNCTIONS TO FIND SQUARE ROOTS , LOGARITHMS , ABSOLUTE VALUES ,
 AND TRIGONOMETRIC VALUES . THE FORM FOR THE BUILT-IN FUNCTIONS IS :

FUNCTION NAME << (EXPRESSION) >>
 WHERE THE EXPRESSION IS ENCLOSED IN PARENTHESIS .

80

THE BUILT-IN FUNCTIONS AND DEFINITIONS ARE :

SQR(X)	--- SQUARE ROOT OF ARGUMENT (MUST BE POSITIVE)
ABS(X)	--- ABSOLUTE VALUE OF ARGUMENT
LOG(X)	--- NATURAL LOGARITHM OF ARGUMENT
EXP(X)	--- EXPONENTIAL FUNCTION , VALUE OF $2.718218 \cdot X$
INT(X)	--- INTEGER PART OF ARGUMENT IS RETURNED
SIN(X)	--- SINE OF THE ARGUMENT
COS(X)	--- COSINE OF ARGUMENT
TAN(X)	--- TANGENT OF ARGUMENT
ATN(X)	--- ARCTANGENT IN RADIANS OF ARGUMENT

IN ALL THE ABOVE BUILT-IN FUNCTIONS THE ARGUMENT IS ANY LEGAL EXPRESSION ;
 AND AS NOTED THE SQR FUNCTION REQUIRES A POSITIVE ARGUMENT ,
 THE TRIGONOMETRIC FUNCTIONS REQUIRE AN ARGUMENT VALUE IN RADIANS .

80

THE BUILT-IN FUNCTIONS ARE USED BY SIMPLY
 CALLING THEM WITH THE APPROPRIATE FUNCTION NAME AND ARGUMENT .
 THESE BUILT-IN FUNCTIONS ARE CONSIDERED TO BE EXPRESSIONS ,
 AND THEY MAY BE USED ANY PLACE WHERE AN EXPRESSION IS LEGAL ,
 FOR EXAMPLE :

LET Z=SQR(ABS(-5)) IS A CORRECT USE OF BUILT IN FUNCTIONS.

80

THE FOLLOWING PROGRAM IS A EXAMPLE OF HOW TO
USE BUILT-IN FUNCTIONS :

```
REM PROGRAM TO COMPUTE SQUARE ROOT AND LOGARITHMS
READ A
LET Y=SQR(A)
LET Z=LOG(A)
PRINT 'SQUARE ROOT=',Y,'LOG=',Z
DATA 4,6,8
END
```

PRODUCES RESULT
SQUARE ROOT= 2.0 LOG= 1.386

80

YOU WILL NOW BE ASKED QUESTIONS CONCERNING
WHAT YOU HAVE JUST LEARNED :

1.) IS THE FOLLOWING STATEMENT LEGAL
REPLY : YES , OR NO.

```
LET Z1=4*SQR(3.0 * EXP(9.3))
```

yes

2. IS THE FOLLOWING SEQUENCE OF PROGRAM STATEMENTS LEGAL
REPLY: YES OR NO.

```
LET B=-9
LET X=SQR(B)
...
...
...
```

no

NO , THE SQUARE ROOT OF A NEGATIVE NUMBER IS AN
UNDEFINED OPERATION . IN THE NEXT LESSON YOU WILL BE SHOW A
BASIC STATEMENT FOR TESTING AND BRANCHING TO ANOTHER SEGMENT
OF THE PROGRAM IF THE TEST IS TRUE . FOR EXAMPLE THE ABOVE
PROGRAM SEQUENCE MIGHT BE ALTERED AS FOLLOWS :

```
LET B=-9
IF B LT 0 THEN 100
50 LET X=SQR(X)
...
```

```

      ...
100 REM  NEGATIVE ARGUMENT
LET B=ABS(B)
GO TO 50
      ...

```

THIS PROGRAM SEQUENCE TESTS FOR A NEGATIVE ARGUMENT , IF TRUE IT BRANCHES TO STATEMENT NUMBER 100 , MAKES THE ARGUMENT POSITIVE AND BRANCHES BACK TO STATEMENT 50 TO COMPLETE THE PROGRAM .

so

C. SUMMARY

WITH THE LET STATEMENT AND BUILT-IN FUNCTIONS , PLUS THE PREVIOUS BASIC STATEMENTS (REM , READ , DATA , PRINT) , YOU ARE FAST GAINING AN EFFECTIVE REPERTOIRE FOR PROGRAMMING USE . IN THE NEXT LESSON YOU WILL LEARN HOW TO SET UP LOOPS IN A PROGRAM SO THAT THE MAIN BODY OF A PROGRAM MAY BE EXECUTED AS OFTEN AS DESIRED . AS YOU ARE DOING YOUR REVIEW PROBLEMS , THINK ABOUT HOW YOU COULD SET UP A LOOP TO READ IN ANY AMOUNT OF DATA , PROCESS IT AND THEN HALT FOR SOME TEST CONDITION .

so

THE FOLLOWING REVIEW PROBLEMS WILL EXERCISE YOUR PROGRAMMING SKILLS TO DATE :

1.) WRITE A PROGRAM TO COMPUTE THE PRESENT WORTH OF AN INVESTMENT FOR SOME NUMBER OF YEARS HENCE . THE FORMULA IS :

$$P = S(1 / ((1 + I)^N))$$

WHERE P IS THE PRESENT WORTH OF A PAYMENT S IN N YEARS HENCE AT AN INTEREST RATE OF I . FOR DATA USE I=.08 , S=5000 , N=20 .

2.) WRITE A PROGRAM TO FIND SIDES A , AND C OF A TRIANGLE USING THE LAW OF SINES FORMULA :

$$A/\sin(A) = B/\sin(B) = C/\sin(C)$$

WHERE THE NUMERATOR IS THE SIDE AND THE DENOMIATOR IS THE SINE OF THE ANGLE , THE CONVERSION FACTOR FROM DEGREES TO RADIANS IS:

1 DEGREE =(3.1416/180) RADIANS . THE DATA FOR THE PROGRAM IS :

SIDE B=34.91 IN. ANGLE A=98.71 DEG.
 ANGLE B=49.97 DEG. ANGLE C=31.32 DEG.

IF YOU WISH TO RUN THESE PROGRAMS NOW , THEN REPLY : YES
 OTHERWISE REPLY : NO.

no

THE ANSWERS TO THE PROBLEMS WILL NOW BE GIVEN SO
THAT YOU MAY CHECK YOUR RESULTS LATER :

- 1.) \$1072.74
- 2.) SIDE A=45.06 IN. AND SIDE C=23.69 IN.

DO YOU WANT TO TERMINATE YOUR INSTRUCTION SESSION ?
(REPLY : YES OR NO)

yes
R; T=4.84/16.96 14.03.44

EXECUTION BEGINS...

*** LESSON 4 ***

THIS INSTRUCTION SEQUENCE WILL COVER BRANCHES . AS YOU HAVE SEEN FROM PREVIOUS PROGRAMS , A PROGRAM'S EXECUTION USUALLY TAKES A DIRECT ROUTE FROM THE FIRST TO THE LAST STATEMENT . THE CONDITION THAT ALLOWS DETOURS TO OCCUR IN PROGRAMS IS CALLED BRANCHING . THERE ARE TWO TYPES OF BRANCHING : UNCONDITIONAL AND CONDITIONAL .

80

A. UNCONDITIONAL BRANCHES

AN UNCONDITIONAL BRANCH IS AN IMPERATIVE TRANSFER OF CONTROL FROM ONE POINT IN A PROGRAM TO ANOTHER . THERE ARE TWO FORMS OF THE UNCONDITIONAL BRANCH : THE 'GO TO' AND THE 'COMPUTED GO TO'

1.) GO TO << STATEMENT NUMBER >>

THIS COMMAND TRANSFERS PROGRAM CONTROL DIRECTLY TO THE STATEMENT NUMBER AND CONTINUES EXECUTION FROM THAT POINT . THE 'GO TO' IS USED FOR FORMING LOOPS IN A PROGRAM .

80

A SAMPLE LOOP FOLLOWS :

```
REM PROGRAM TO COMPUTE PRESENT WORTH
REM P=INVESTMENT,S=PRINCIPAL,I=INTEREST RATE,N=NR.YEARS
PRINT'INVESTMENT','PRINCIPAL','INTEREST','NR.YEARS'
10 READ S,I,N
LET P=S*(1/((1+I)**N))
PRINTP,S,I,N
GO TO 10
DATA 5000,.08,20,5000,.08,10,5000,.06,10
END
```

PRODUCES THE OUTPUT :

INVESTMENT	PRINCIPAL	INTEREST	NR.YEARS
1072.74	5000	.08	20
2315.97	5000	.08	10
2791.99	5000	.06	10

*** ERROR , YOU TRIED TO READ MORE NUMERIC DATA THAN YOU PUT IN ***

80

THE ERROR OCCURS BECAUSE YOU RUN OUT OF DATA DURING THE EXECUTION OF THE LOOP SET-UP BY THE UNCONDITIONAL TRANSFER . IF THE READ STATEMENT WERE NOT IN THE LOOP TO CAUSE THE PROGRAM TO STOP . THEN YOU WOULD BE IN AN 'INFINITE LOOP' , A CONDITION IN WHICH THERE IS NO WAY TO STOP , YOU MUST ALWAYS CHECK FOR THE 'INFINITE LOOP' CONDITION BY MAKING SURE THAT YOUR PROGRAM HAS AN EXIT .

80

2,) ON << EXPRESSION >> GO TO << STATEMENT NUMBER ,...., STATEMENT NUMBER >>

THIS SPECIAL FORM OF THE 'GO TO' COMMAND , IS CALLED THE 'COMPUTED GO TO' , THE EXPRESSION IN THE FORM OF THE STATEMENT MUST EVALUATE TO AN INTEGER NUMBER BETWEEN 1-->9999 . IF IT IS NOT AN AN INTEGER , OR OUTSIDE THIS RANGE AN ERROR WILL OCCUR .

WHEN THE 'COMPUTED GO TO' IS EXECUTED THE EXPRESSION IS EVALUATED , AND PROGRAM CONTROL TRANSFERS TO THE N-TH STATEMENT NUMBER , WHERE N-TH REPRESENTS THE VALUE OF THE EXPRESSION . FOR EXAMPLE :

LET I=3
ON I GO TO 100,33,475,9999

80

EXECUTION OF THE 'COMPUTED GO TO' WOULD CAUSE PROGRAM CONTROL TO TRANSFER UNCONDITIONALLY TO STATEMENT NUMBER 475 .

YOU MUST BE CAREFUL WHEN USING THE 'COMPUTED GO TO' NOT ONLY BECAUSE OF INFINITE LOOPS ; BUT BECAUSE THE EXPRESSION MUST BE AN INTEGER BETWEEN 1-->9999 , AND THERE MUST BE A STATEMENT NUMBER FOR 'ALL' POSSIBLE VALUES OF THE EXPRESSION .

80

3. CONDITIONAL BRANCHING

THE CONDITIONAL BRANCH TRANSFERS CONTROL ONLY IF CERTAIN RELATIONS ARE TRUE . IF THE THE TEST OF RELATIONS IS TRUE THEN TRANSFER OF CONTROL OCCURS ; OTHERWISE PROGRAM CONTROL CONTINUES WITH THE NEXT STATEMENT . THE FORM OF THE CONDITIONAL BRANCH IS:

IF << EXPRESSION >> << RELATION >> << EXPRESSION >> THEN << STATEMENT NUMBER >>

NOTE THAT ALPHA VARIABLES ARE NOT ALLOWED AS AN EXPRESSION IN A CONDITIONAL BRANCH .

80

THE RELATIONS ARE :

SYMBOLS	EXAMPLE	MEANING
GT	A GT B	A GREATER THAN B
GE	A GE B	A GREATER THAN OR EQUAL TO B
LT	A LT B	A LESS THAN B
LE	A LE B	A LESS THAN OR EQUAL TO B
NE	A NE B	A NOT EQUAL TO B
=	A = B	A EQUAL B

80

WHEN THE CONDITIONAL STATEMENT IS EXECUTED THE
(EXPRESSION RELATION EXPRESSION) IS TESTED , AND IF THE RELATION
IS TRUE , THEN CONTROL IS TRANSFERRED TO THE STATEMENT NUMBER.
OTHERWISE PROGRAM CONTROL CONTINUES TO THE NEXT SEQUENTIAL
STATEMENT , FOR EXAMPLE :

```
1 READ A
...
...
IF A LT 0 THEN 90
LET X=SQR(A)
...
...
90 PRINT 'ILLEGAL ARGUMENT',A
GO TO 1
...
```

THE ONLY TIME THAT THE CONDITIONAL BRANCH IS EXECUTED IS WHEN
A IS LESS THAN 0 .

80

YOU WILL NOW BE ASKED SOME QUESTIONS ABOUT BRANCHING :
1.) ARE THE FOLLOWING STATEMENTS CORRECT
REPLY: YES OR NO)

GO TO END

no

IF X1 LT A\$ THEN 10

no

IF(X=3-4) GE 10 THEN GO TO 100

yes

YOUR ANSWER IS INCORRECT . THE ONLY THING ALLOWED
AFTER THEN IS A STATEMENT NUMBER .

LET Y=6,
ON Y GO TO 1,3,5,7,999

no

2.) CONSIDER THIS PROGRAM SEGMENT , ANY ERRORS (REPLY: YES OR NO).

```
1 READ A,B
3 LET Z=A*B
IF Z LT 0 GO TO 999
...
...
GO TO 3
DATA 3,5,7,10
999 END
```

yes

THERE IS AN 'INFINITE' LOOP IN THIS PROGRAM . IT
COULD BE CORRECTED BY CHANGING THE GO TO 3 , TO GO TO 1 .
WHEN YOU WRITE PROGRAMS HAVING BRANCHES OR LOOPS YOU MUST ALWAYS
CONSIDER HOW THE PROGRAM WILL STOP. YOU HAVE OBSERVED THAT
AN 'INFINITE LOOP' CAN BE STOPPED BY HAVING A READ STATEMENT
IN THE LOOP AND JUST RUN OUT OF DATA . HOWEVER, ENDING A PROGRAM
ON AN ERROR IS AN INELIGANT METHOD . THE MOST COMMON METHODS
USE THE 'GO TO' AND ' IF/THEN' COMMANDS TO CONTROL PROGRAM
LOOPS AND ARE AS FOLLOWS :

40

1. COUNT AND TEST METHOD , IN WHICH A COUNTER
IS INCREMENTED IN THE LOOP , AND WHEN THE COUNTER REACHES A
CERTAIN VALUE , BRANCH OUT OF THE LOOP . EXAMPLE PROGRAM

```
REM COUNT AND TEST METHOD
REM N IS COUNTER , INITIALIZED TO 0 , AND COUNTS FROM 1-->10
```

```

LET N=Z=0
READ X
10 LET Z=Z+X
LET N=N+1
IF N GT 10 THEN 100
GO TO 10
100 PRINT'SUM=',Z
DATA 10
END

```

REPLY WITH VALUE OF Z .

11

YOUR ANSWER IS INCORRECT . THE ONLY WAY TO BE SURE OF VALUES IN A LOOP IS TO SET UP A TABLE OF THE VARIABLES AND KEEP TRACK OF THERE VALUES IN THE LOOP :

X	N	Z
10	0	0
	1	10
	2	20
	3	30
	...	
	9	90
	10	100
	11	110

THUS Z=110

2. READ AND TEST METHOD , IN WHICH A VALUE IS READ IN AND TESTED FOR THE END OF LOOP CONDITION .

```

REM READ AND TEST DEMONSTRATION
REM 9999 IS END VALUE
LET Z=0
1 READ X
IF X=9999 THEN 9999
LET Z=Z+X
GO TO 1
DATA 1,2,3,4,5,6,9999
9999 PRINT 'SUM=',Z
END

```

REPLY WITH VALUE OF Z

21

C. SUMMARY

YOU HAVE SEEN HOW THE UNCONDITIONAL BRANCHES ('GO TO' AND 'COMPUTED GO TO') TRANSFER PROGRAM CONTROL, AND HOW THE CONDITIONAL BRANCH ('IF/THEN') TESTS FOR TRANSFER OF PROGRAM CONTROL; AND YOU HAVE OBSERVED THE CONTROL OF LOOPS SO THAT A PROGRAM SEGMENT MAY BE REPEATED UNTIL A SPECIFIED CONDITION IS MET. IN THE NEXT LESSON YOU WILL LEARN A BASIC STATEMENT TO CONTROL A LOOP BY THE INCREMENT AND TEST METHOD.

THE FOLLOWING PROBLEMS WILL TEST YOUR NEW SKILLS :

80

1.) WRITE A PROGRAM TO COUNT THE NUMBERS BETWEEN 50 AND 60, AND ALSO PRINT THEM OUT. THE INPUT DATA IS 10,50,35,75,62,60,54,54.

2.) WRITE A PROGRAM TO COMPUTE THE PRESENT WORTH OF AN INVESTMENT FOR SOME YEARS HENCE, AT VARIOUS INTEREST RATES. THE FORMULA IS:

$$P = S / ((1 + I)^N)$$

WHERE P=PRESENT WORTH, S=PRINCIPAL, I=INTEREST, AND N=NR.OF YEARS. FOR DATA USE S=5000, AND I=.04-->.8, IN INCREMENTS OF .01, AND N=20

IF YOU DESIRE TO EXECUTE THESE PROGRAMS NOW
REPLY: YES; OTHERWISE REPLY: NO

no

DO YOU WANT TO TERMINATE YOUR INSTRUCTION SESSION?
(REPLY: YES OR NO)

no

IF YOU WANT TO EXECUTE PROGRAMS AT THIS TIME
THEN REPLY: YES; OTHERWISE REPLY: NO AND THE INSTRUCTION
WILL CONTINUE.

no

REPLY WITH THE NUMBER OF THE LESSON YOU WISH TO COVER

EXECUTION BEGINS...

*** LESSON 5 ***
THIS LESSON WILL INTRODUCE YOU TO ITERATION , SUBSCRIPTED
VARIABLES , AND LISTS (VECTORS) AND TABLES (MATRICES).

A. ITERATION (LOOPING)

IN THE LAST LESSON YOU WERE SHOWN HOW TO USE CONDITIONAL AND
UNCONDITIONAL BRANCHES TO CONTROL LOOPING . THE COUNT AND TEST
ITERATIVE LOOP OCCURS SO FREQUENTLY THAT AN ABBREVIATED BASIC
STATEMENT HAS BEEN DEvised TO CONTROL LOOPING . THE ITERATIVE
LOOP HAS THE FOLLOWING FORM :

```
FOR << SIMPLE VARIABLE >> = << EXPRESSION >> TO << EXPRESSION >>  
    STEP << EXPRESSION >>
```

```
    ...  
    ...  
    ...  
NEXT << SIMPLE VARIABLE >>
```

SO

FOR EXAMPLE CONSIDER THIS PROGRAM SEGMENT :

```
FOR I=1 TO 10 STEP 2  
  LET X=X+1  
NEXT I
```

THE SIMPLE VARIABLE FOLLOWING 'FOR' IS THE LOOP INDEX . WHEN
THE FOR/NEXT PAIR IS EXECUTED , THE LOOP INDEX IS GIVEN THE
VALUE (INITIALIZED) OF THE FIRST EXPRESSION (I=1 IN EXAMPLE).
THIS INDEX IS THEN TESTED TO DETERMINE WHETHER IT IS 'GREATER THAN'
THE SECOND EXPRESSION AFTER 'TO' (10 IN EXAMPLE). IF IT IS
GREATER, CONTROL IS TRANSFERRED TO THE STATEMENT FOLLOWING
'NEXT'. OTHERWISE THE REMAINING STATEMENTS WITHIN THE LOOP
(FOR/NEXT) ARE EXECUTED SEQUENTIALLY UNTIL THE 'NEXT' STATEMENT
IS REACHED.

SO

WHEN THE 'NEXT' STATEMENT IS REACHED , THE LOOP
INDEX IS INCREASED (INCREMENTED) BY THE AMOUNT OF THE EXPRESSION
FOLLOWING 'STEP', AND CONTROL IS TRANSFERRED BACK TO THE 'FOR'
STATEMENT WHERE THE LOOP CONTINUES UNTIL THE INDEX VALUE IS

GREATER THAN THE FINAL VALUE . FOR EXAMPLE :

```
REM DEMO LOOP. SUM THE NUMBERS FROM 1-->10.
LET C=0
FOR I=1 TO 10 STEP 1
LET C=C+1
NEXT I
PRINT'SUM=',C
END
```

80

YOU WILL NOTICE THAT THE SIMPLE VARIABLE FOLLOWING 'NEXT' IS THE SAME AS THE SIMPLE VARIABLE FOLLOWING 'FOR', AND THAT THE 'NEXT' STATEMENT MARKS THE END OF THE LOOP . BECAUSE THE INCREMENT VALUE OF A LOOP IS COMMONLY ONE(1) , THE 'STEP' MODIFIER AND ITS EXPRESSION MAY BE OMITTED , AND THE INCREMENT VALUE WILL BE ASSUMED TO BE ONE(+1). FOR EXAMPLE THE ABOVE 'FOR' STATEMENT COULD BE WRITTEN :

```
FOR I=1 TO 10
```

THE INCREMENT VALUE AFTER 'STEP' MAY BE POSITIVE OR NEGATIVE ALLOWING THE FLEXIBILITY OF LOOPING FORWARD OR BACKWARD . FOR A NEGATIVE 'STEP' VALUE THE TEST BECOMES 'LESS THAN'. FOR EXAMPLE THE FOLLOWING 'FOR' STATEMENTS ARE EQUIVALENT :

```
FOR I=1 TO 10
FOR I=10 TO 1 STEP -1
```

80

ANOTHER USEFUL TECHNIQUE OF LOOPING IS 'NESTING' NESTING REFERS TO PLACING ONE LOOP INSIDE ANOTHER LOOP . THE INNER LOOP 'SPINS' AROUND AS MANY TIMES AS THE OUTER LOOP IS INCREMENTED . FOR EXAMPLE CONSIDER THIS PROGRAM SEGMENT

```
FOR I=1 TO 10
FOR J=1 TO 20 STEP 2
...
...
NEXT J
NEXT I
```

IN THIS EXAMPLE THE OUTSIDE LOOP(I) IS

REPEATED 10 TIMES, AND THE INNER LOOP(J) WOULD BE REPEATED 20 TIMES FOR EACH INCREMENT OF THE OUTSIDE LOOP, OR 200 REPETITIONS. LOOPS MAY BE NESTED UP TO A MAXIMUM OF 20 ; HOWEVER , THEY CANNOT OVERLAP . THE INNERMOST LOOP MUST BE CLOSED WITH ITS 'NEXT' STATEMENT BEFORE ENCOUNTERING THE NEXT OUTER LOOP'S 'NEXT' STATEMENT . FOR EXAMPLE :

```
FOR X=10 TO 1 STEP -1
FOR Y=3 TO 5
FOR Z=-3 TO -5 STEP -1
...
NEXT Z
NEXT Y
NEXT X
```

80

WITHIN A FOR/NEXT LOOP CONDITIONAL AND UNCONDITIONAL BRANCHES MAY BE USED TO TRANSFER CONTROL OUT OF A LOOP OR WITHIN LIMITS OF THE SAME LOOP . HOWEVER , IT IS NOT POSSIBLE TO BRANCH INTO THE MIDDLE OF A FOR/NEXT LOOP BECAUSE LOGIC PROBLEMS OCCUR AND AN ERROR WILL RESULT . AN ADDITIONAL ITEM TO BE CAREFUL ABOUT IS USING THE INDEX VARIABLE OF THE FOR/NEXT LOOP IN COMPUTATIONS . IF YOU ALTER THE VALUE OF THE LOOP INDEX YOU WILL EFFECT THE ACTION OF THE LOOP . FOR EXAMPLE :

```
FOR I=1 TO 10
LET I=I+10
NEXT I
PRINT I
END
```

REPLY WITH VALUE OF I THAT IS PRINTED

11

YOU WILL NOW BE ASKED SOME QUESTIONS ABOUT WHAT YOU HAVE JUST LEARNED .

```
1.) SAMPLE PROGRAM
LET S=0
FOR K=-5 TO 5
LET S=S+K
NEXT K
PRINT'SUM=',S
END
```

REPLY WITH VALUE OF S .

0

```
2.) SAMPLE PROGRAM
FOR I=100 TO 1 STEP 2
LET Z=I**2
LET Y= Z+10
```

```

NEXT I
PRINT I
END

```

REPLY WITH VALUE OF I

1

YOUR ANSWER IS INCORRECT . THE INDEX VALUE OF THE LOOP(I=100) IS GREATER THAN THE FINAL VALUE(1) IN THE FIRST TEST . THUS I=100 . IF THE LOOP WERE DECREMENTED IN STEPS OF -2 THEN THE LOOP WOULD BE EXECUTED AND THEN I=0 .

```

3.) SAMPLE PROGRAM
LET T=0
FOR I=5 TO 1 STEP -1
FOR J=1 TO 5
IF I=J THEN 10
GO TO 15
10 LET T=T+1
PRINT I
15 NEXT J
NEXT I
PRINT T
END

```

REPLY WITH VALUE OF T .

5

B. SUBSCRIPTED VARIABLES/LISTS AND TABLES

1. IN LESSON 1 YOU LEARNED THAT SIMPLE VARIABLES WERE A LETTER OR A LETTER FOLLOWED BY A DIGIT . SUBSCRIPTED VARIABLES CONSIST OF A LETTER FOLLOWED BY A SINGLE OR DOUBLE SUPSCRIPT IN PARENTHESIS THE SUBSCRIPTS MAY BE ANY LEGAL EXPRESSION THAT EVALUATES TO AN INTEGER VALUE . FOR EXAMPLE :

A(1) , B(3) , D(1,3) , Z'(1,J) , X(3**A) , D(A(1)) ARE LEGAL SUBSCRIPTED VARIABLE

BUT A1(1) , Z(1,2,3) ARE ILLEGAL SUBSCRIPTED VARIABLES.

A USE OF SUBSCRIPTED VARIABLES FOLLOWS :

80

2. A NUMERIC LIST , OR VECTOR , OR SINGLE DIMENSIONED ARRAY , IS A SET OF NUMERIC VALUES ARRANGED IN AN ORDERLY MANNER . FOR EXAMPLE , SUPPOSE YOU WOULD LIKE TO READ SOME NUMBERS INTO YOUR PROGRAM AND HAVE THESE NUMBERS AVAILABLE AND IDENTIFIED FOR USE AT A LATER TIME . YOU COULD ASSIGN SIMPLE VARIABLES TO EACH VALUE , BUT WHAT IF YOU HAD 100 NUMBERS ? IT IS EASIER TO THINK OF THE NUMBERS AS A LIST OF VALUES OR A VECTOR THE SIZE OF WHICH IS DETERMINED BY HOW MANY NUMBERS YOU HAVE . YOU THEN SIMPLY ASSIGN THE VALUES TO THE LIST .

80

THE FOLLOWING PROGRAM WILL ASSIGN 10 VALUES TO THE LIST 'A' WHICH CONTAINS 10 ELEMENTS :

```
DIM A(10)
FOR L=1 TO 10
  READ A(L)
NEXT L
DATA 1,3,7,5,6,9,4,2,14,4
END
```

THE LIST A , CONTAINING 10 ELEMENTS , IS REPRESENTED BY THE SUBSCRIPTED VARIABLE A(L) . READ A(L) IS IN A FOR/NEXT LOOP , AND WITHIN THE LOOP THE 11ST ELEMENTS A(1)-->A(10) ARE ASSIGNED VALUES . NOW THE LIST A HOLDS THE 10 VALUES AND EACH VALUE IS IDENTIFIABLE . CONSIDER THE FOLLOWING PROBLEM WHICH SEARCHES A LIST TO FIND THE LARGES

80

```
DIM N(10)
FOR I=1 TO 10
  LET N(I)=0
NEXT I
READ K
FOR J=1 TO K
  READ N(J)
NEXT J
LET L=N(1)
FOR J=2 TO K
  IF N(J) LT L THEN 10
  LET L=N(J)
```

```

10 NEXT J
PRINT 'LARGEST NUMBER=',L
DATA 5,3,5,9,10,6
END

```

REPLY WITH VALUE OF L

10

THE FIRST FOR/NEXT LOOP ZEROS OUT THE LIST .
 IT IS A GOOD PRACTICE TO PUT SOME VALUES IN THE LISTS YOU USE
 OTHERWISE THE COMPUTER MAY ASSIGN RANDOM VALUES . BY PUTTING
 ZERO IN EACH ELEMENT OF THE LIST YOU ARE ASSURED THAT THE LIST
 IS CLEANED UP BEFORE YOU USE IT.

80

3. IN ADDITION TO LISTS(VECTORS), BASIC ALLOWS
 YOU THE ABILITY TO USE TABLES , OR MATRICES , OR TWO DIMENSIONAL
 ARRAYS . THE SUBSCRIPTS OF A TABLE REPRESENT THE ROWS AND
 COLUMNS OF THE TABLE. THE FIRST SUBSCRIPT IS THE ROW AND THE
 SECOND SUBSCRIPT IS THE COLUMN . FOR EXAMPLE IN TABLE'D':
 D(3,4) REFERS TO THE VALUE OF THE ELEMENT IN ROW 3 , COLUMN 4
 OF TABLE'D'.

80

AS WITH A LIST , ANY ELEMENT OF A TABLE MAY BE
 REFERENCED BY DEFINING THE PAIR OF SUBSCRIPTS AS DESIRED IN
 ROW-COLUMN ORDER . IN A 3X3 TABLE(MATRIX) THE TABLE IS REFERENCED
 AS FOLLOWS :

1,1	1,2	1,3
2,1	2,2	2,3
3,1	3,2	3,3

WHERE THE FIRST SUBSCRIPT IDENTIFIES THE ROW AND THE SECOND THE COLUMN .
 USING THIS REFERENCE SYSTEM CONSIDER HOW TO FILL THE FOLLOWING TABLE

1	2	3
4	5	6
7	8	9

80

THIS TABLE'X' COULD BE FILLED AS FOLLOWS :

```

DIMX(3,3)
FOR I=1 TO 3
FOR J=1 TO 3
READ X(I,J)
NEXT J
NEXT I
DATA 1,2,3,4,5,6,7,8,9

```

END

REPLY WITH VALUE OF X(2,3)

6

NO WITH TABLE 'X' ASSIGNED VALUES CONSIDER THIS
PROGRAM (ASSUMING TABLE 'X' HAS BEEN FILLED BY THE ABOVE PROGRAM)

```
LET S=0
FOR I=1 TO 3
FOR J=1 TO 3
IF I NE J THEN 5
LET S=S+X(I,J)
5 NEXT J
NEXT I
PRINT 'SUM=',S
END
```

REPLY WITH VALUE OF S

15

YOU HAVE SEEN HOW SUBSCRIPTED VARIABLES ARE
USED TO SET UP LISTS (VECTORS) AND TABLES (MATRICES). HOWEVER TO
USE LISTS AND TABLES IN A PROGRAM, YOU MUST DIMENSION THE
MAXIMUM SIZE OF YOUR LIST OR TABLE SO THAT ENOUGH SPACE WILL
BE ALLOCATED IN THE COMPUTER MEMORY. THIS DIMENSIONING IS DONE
WITH THE DIM STATEMENT.

80

C. DIM STATEMENT

THE DIM STATEMENT TELLS THE COMPUTER THE MAXIMUM SIZE OF VECTORS
AND TABLES THAT WILL BE USED IN YOUR PROGRAM. THE DIM STATEMENT
MUST APPEAR IN THE PROGRAM BEFORE 'ANY' REFERENCE IS MADE
TO THE LIST OR TABLE. IN GENERAL PRACTICE THE DIM STATEMENT
IS USUALLY THE FIRST STATEMENT IN THE PROGRAM. THE FORM OF THE
DIM STATEMENT IS :

DIM <<LIST VARIABLE>> (<<SIZE>>)

DIM <<TABLE VARIABLE>> (<<SIZE,SIZE>>)

80

THE LIST AND TABLE VARIABLES ARE SUBSCRIPTED VARIABLES AS DEFINED EARLIER. THE SIZE IS AN UNSIGNED INTEGER IN PARENTHESIS WHICH DENOTES THE MAXIMUM SIZE OF THE LIST OR TABLE. THE DIM STATEMENT MAY CONTAIN A NUMBER OF LISTS OR TABLES WITH THEIR SIZES SEPARATED BY COMMAS, FOR EXAMPLE:

DIM A(6),X(10,3),Z(14,21)

GO

IF YOU TRY TO REFERENCE AN ELEMENT IN A LIST OR TABLE BEYOND THE MAXIMUM SIZE IN THE DIM STATEMENT YOU WILL GET AN ERROR. THE MAXIMUM SIZE LIST(VECTOR) OR TABLE(MATRIX) ALLOWED BY THE CAI-BASIC COMPILER IN ANY ONE PROGRAM IS A TOTAL OF 1600 COMPUTER MEMORY SPACES.

YOU WILL NOW BE ASKED SOME QUESTIONS:

1.) ARE THE FOLLOWING DIM STATEMENTS CORRECT, REPLY: YES OR NO

DIM A1(10)

yes

THE STATEMENT IS INCORRECT. SUBSCRIPTED VARIABLES ARE A 'SINGLE' LETTER FOLLOWED BY ONE OR TWO SUBSCRIPTS IN PARENTHESIS.

DIM X(500),B(1,10),C(5,5,5)

no

D. SUMMARY

IN THIS LESSON YOU HAVE LEARNED HOW TO USE THE FOR/NEXT STATEMENT AND HOW TO MANIPULATE LISTS(VECTORS) AND TABLES(MATRICES) BY USING SUBSCRIPTS VARIABLES AND THE DIM STATEMENT. YOU NOW HAVE ALL THE TOOLS TO BEGIN WRITING SOPHISTICATED PROGRAMS; AND AS YOU WRITE MORE COMPLICATED PROGRAMS, YOU WILL FIND A NEED FOR SUBROUTINES. SUBROUTINES ARE COMMONLY USED PROGRAM SEGMENTS THAT ARE USED OVER AGAIN IN OTHER PARTS OF YOUR PROGRAM. SUBROUTINES ALLOW YOU TO BRANCH TO THE COMMONLY USED SEGMENT AND THEN RETURN TO WHERE YOU WERE AND CONTINUE EXECUTING. THE SUBROUTINE CAN BE 'CALLED' FROM ANYWHERE IN YOUR PROGRAM. THE GOSUB STATEMENT ALLOWS SUBROUTINES IN BASIC, AND YOU WILL BE

INTRODUCED TO IT IN THE NEXT LESSON .

YOU WILL NOW BE GIVEN TWO OPTIONAL PROGRAMMING
PROBLEMS TO EXERCISE YOUR NEW TOOLS .

1.) WRITE A PROGRAM TO REVERSE THE NUMBERS IN A 10-ELEMENT LIST 'X'
IN OTHER WORDS INTERCHANGE X(1) WITH X(10), X(2) WITH X(9), ETC.
READ IN TEN VALUES AND TEST YOUR PROGRAM BY PRINTING THE LIST
BEFORE AND AFTER .

2.) WRITE A PROGRAM TO ARRANGE THE FOLLOWING LIST IN
DECENDING ORDER : 10,30,5,15,40 . ONE METHOD OF APPROACHING THIS
IS TO CHECK THE FIRST ELEMENT OF THE LIST AGAINST THE SECOND .
IF THE FIRST IS NOT LARGER THEN EXCHANGE THE TWO , OTHERWISE
GO AND COMPARE THE NEXT TWO IN THE LIST. THIS PROCESS IS REPEATED
UNTIL THERE ARE NO MORE EXCHANGES TO BE MADE . A COUNT OF
THE EXCHANGES CAN BE MADE , AND WHEN THE COUNT EQUALS 0 THE LIST IS IN ORDER.

go

IF YOU WANT TO EXECUTE THESE PROBLEMS REPLY : YES ,OTHERWISE NO ,

no

IF YOU WOULD LIKE TO SEE A SOLUTION TO THE PROBLEMS REPLY : YES , OTHERWISE NO

no

DO YOU WANT TO TERMINATE YOUR INSTRUCTION SESSION ?
(REPLY : YES OR NO)

no

IF YOU WANT TO EXECUTE PROGRAMS AT THIS TIME
THEN REPLY : YES ; OTHERWISE REPLY : NO AND THE INSTRUCTION
WILL CONTINUE .

no

REPLY WITH THE NUMBER OF THE LESSON YOU WISH TO COVER

EXECUTION BEGINS...

*** LESSON 6 ***
THIS LESSON WILL INTRODUCE YOU TO SUBROUTINES AND THE PROGRAMMING
TECHNIQUE CALLED 'RECURSION'.

A. SUBROUTINES

IN MANY PROGRAMS A BLOCK OF STATEMENTS MAY BE NEEDED ON MORE
THAN ONE OCCASION. SINCE THE REPETITION OF A BLOCK OF STATEMENTS
IS BURDENSOME, A TECHNIQUE TO ECONOMIZE ON CODING INSTRUCTIONS
CALLED A SUBROUTINE, IS PRESENTED. THE FORM OF THE SUBROUTINE IS :

```
GOSUB << STATEMENT NUMBER >>
...
...
...
RETURN
```

80

EXECUTION OF THE GOSUB STATEMENT CAUSES THE
COMPUTER TO TRANSFER CONTROL TO THE STATEMENT NUMBER AFTER 'GOSUB'.
WHEN CONTROL IS TRANSFERRED, STATEMENTS ARE EXECUTED SEQUENTIALLY
UNTIL A 'RETURN' IS ENCOUNTERED. AT THAT TIME, CONTROL
IS RETURNED TO THE NEXT STATEMENT FOLLOWING THE 'GOSUB'
STATEMENT WHICH 'CALLED' THE SUBROUTINE. FOR EXAMPLE CONSIDER
THE PROGRAM SEGMENT :

80

```
...
PRINT A,B,C,D,E
GOSUB 500
FOR I=1 TO E
...
...
500 REM SUBROUTINE
LET X=A+B
LET Z=B+C
LET R=SQR(D)
RETURN
...
```

80

THE SUBROUTINE CONSISTS OF A SEQUENCE OF BASIC STATEMENTS ENDING WITH A 'RETURN' STATEMENT . THE SUBROUTINE MAY ONLY BE ENTERED FROM A 'GOSUB' STATEMENT , AND WILL ONLY RETURN TO ITS PROPER PLACE AFTER ENCOUNTERING A 'RETURN' STATEMENT . ALL THE VARIABLES OF THE MAIN PROGRAM ARE AVAILABLE (PASSED) TO THE SUBROUTINE , AND VICE VERSA . THE VARIABLES IN THE SUBROUTINE MUST BE CHOSEN CAREFULLY SO AS NOT TO ACCIDENTLY CONFLICT OR ALTER VARIABLES IN THE MAIN PROGRAM .

80

THE FOLLOWING PROGRAM TO COMPUTE THE GREATEST COMMON DENOMINATOR(GCD) OF THREE NUMBERS BY EUCLID'S ALGORITHM WILL DEMONSTRATE A USE OF SUBROUTINES :

```

      REM FIND GCD OF A,B,C
      PRINT 'A','B','C','GCD'
20  READ A,B,C
      IF C=9999 THEN 9999
      LET X=A
      LET Y=B
      REM G=GCD OF A,B
      GOSUB 200
      LET X=G
      LET Y=C
      REM G=GCD OF G,C
      GOSUB 200
      PRINT A,B,C,G
      GO TO 20
      200 LET Q=INT(X/Y)
          LET R=X-Q*Y
          IF R=0 THEN 300
          LET X=Y
          LET Y=R
          GO TO 200
      300 LET G=Y
      RETURN
      DATA 60,90,120
      DATA 38456,64872,98765
      DATA 0,0,9999
9999 END

```

OUTPUT PRODUCED :

A	B	C	GCD
60	90	120	30
38456	64872	98765	1

80

GOSUB STATEMENTS MAY BE NESTED TO LOGICALLY CALL ANOTHER GOSUB , SIMILAR TO FOR/NEXT NESTED LOOPS . YOU MUST ONCE MORE BE CAREFUL ABOUT THE STATUS OF VARIABLES BECAUSE VARIABLES WILL BE PASSED FROM ONE SUBROUTINE TO ANOTHER . A SUBROUTINE THAT IS NESTED SO THAT IT CALLS ITSELF IS CALLED RECURSION OF SUBROUTINES OR RECURSION .

80

8. RECURSION

RECURSION IS A PROGRAMMING TECHNIQUE IN WHICH SUBROUTINES CAN CALL THEMSELVES .FOR EXAMPLE CONSIDER THIS PROGRAM WHICH FINDS THE FACTORIAL OF A NUMBER USING ITERATIVE METHODS AND THEN USING RECURSION :

```

      REM FACTORIAL : F(N)=1*2*3*.....*(N-1)*N
      PRINT'ITERATIVE SOLUTION'
      PRINT'N','F(N)'
10  READ N
    IF N GT 0 THEN 20
    GO TO 50
20  PRINT N,
    GOSUB 100
    PRINT F
    GO TO 10
    100 REM ITERATIVE SOLUTION
        LET F=1
        FOR I=1 TO N
          LET F=F*I
        NEXT I
        REM RETURN F=FACTORIAL(N)
        RETURN
50  REM FACTORIAL : F(N)= IF N=0 THEN F(N)=1
    REM OTHERWISE , F(N)=N*F(N-1)
    RESTORE
    PRINT'RECURSIVE SOLUTION'
60  READ N
    IF N GT 0 THEN 70
    GO TO 9999
70  PRINT N,
    GO SUB 200
    PRINT F
    GO TO 60
    200 REM RECURSIVE SOLUTION
        IF N GT 0 THEN 210
        LET F=1
        RETURN
    210 LET N=N-1
        REM RECURSIVE CALL

```

```

      GOSUB 200
      LET N=N+1
      LET F=F*N
    RETURN
  DATA 2,5,8,6,-1
999 END

```

80

IN THE ITERATIVE METHOD THE FACTORIAL FUNCTION, $F(N)$, WAS MULTIPLIED BY ITSELF IN A LOOP FROM $I=1 \rightarrow N$. IN THE RECURSIVE SOLUTION THE FACTORIAL FUNCTION, $F(N)$, IS DEFINED IN TERMS OF ITS FINAL VALUE. WHEN $N=0$, $F(N)=1$; OTHERWISE $F(N)=N \cdot (\text{FACTORIAL OF } N-1)$.

TO KEEP TRACK OF WHERE THE SUBROUTINE CALLS RETURN IN RECURSION IT HELPS TO EVISIONING A LAST-IN-FIRST-OUT (LIFO) STACK CONTAINING THE ADDRESS OF THE GOSUB STATEMENTS. EVERY TIME A GOSUB IS ENCOUNTERED, PUT ITS ADDRESS ON TOP OF THE STACK (PUSHING DOWN ANYTHING PREVIOUSLY ON THE STACK). THEN EVERY TIME A RETURN IS ENCOUNTERED, RETURN TO THE TOP ADDRESS ON THE STACK (AND POP UP THE NEXT ADDRESS ON THE STACK).

80

TO FULLY UNDERSTAND THE CONCEPT OF RECURSION YOU SHOULD STEP THROUGH THE FACTORIAL PROBLEM BY HAND USING THE HELP OF THE STACK TO SEE HOW RECURSION WORKS. IF YOU UNDERSTAND THE CONCEPT OF RECURSION YOU ARE READY TO SOLVE THIS PROBLEM:

```

      LET X=1
      GOSUB 100
      PRINT X
      GO TO 9999
    100 LET X=X+1
      IF X GT 3 THEN 150
      GOSUB 100
    150 LET X=X+1
      RETURN
9999 END

```

REPLY WITH VALUE OF X

5

YOUR ANSWER IS INCORRECT . CONSIDER THE FOLLOWING
TABLE OF VALUES FOR X , AND ITEMS IN THE STACK(1-FIRST GOSUB, 2-SECOND GOSUB)

X=1	STACK
	1
X=2	STACK
	2
	1
X=3	STACK
	2
	2
	1
X=4	
X=5	STACK
	2
	1
X=6	STACK
	1
X=7	

YOU SHOULD STEP THROUGH THIS
EXAMPLE UNTIL YOU UNDERSTAND THE RECURSION TECHNIQUE . HOWEVER,
KNOWING HOW TO USE RECURSION IS NOT A REQUIREMENT FOR KNOWING
HOW TO USE BASIC , IT IS ONLY A CLASSIC PROGRAMMING TECHNIQUE .

C. SUMMARY
SUBROUTINES AND RECURSION ARE A VALUABLE ADDITION TO YOUR REPERTOIR
OF BASIC STATEMENTS . THEY SAVE BOTH PROGRAMMER TIME AND
COMPUTER STORAGE SPACE . THE GOSUB/RETURN COMMAND AND THE OTHER
TWELVE BASIC STATEMENTS THAT YOU HAVE ALREADY LEARNED AND USED
FORM THE BASIC LANGUAGE .
THE FACILITY THAT YOU GAIN IN PROGRAMMING BY USING THE BASIC
LANGUAGE WILL DEPEND UPON HOW OFTEN YOU EXERCISE YOUR SKILLS.
THE LAST LESSON WILL PROVIDE YOU WITH A BRIEF SUMMARY OF THE
BASIC LANGUAGE .

80

THE FOLLOWING PROBLEMS WILL TEST YOUR LATEST SKILLS :

1. COMPUTE THE NET SALARY , RETIREMENT CONTRIBUTION
AND TAX FOR N EMPLOYEES. NET PAY=GROSS SALARY-RETIREMENT-TAX
USE SUBROUTINES TO CALCULATE :

A) RETIREMENT CONTRIBUTION

IF SALARY <\$800 , R=\$0.0
IF SALARY <\$2500 , R=\$10.
IF SALARY >\$2500 , R=\$20,

B) TAX

IF SALARY <\$600 , T=\$5 ; OTHERWISE
T=.03(SALARY)

THE DATA IS:
EMPLOYEE

GROSS SALARY

JONES	3000
SMITH	5500
BROWN	475
DALEY	10,500
BERRY	4300

2. WRITE A RECURSIVE PROGRAM TO SUM THE NUMBERS
FROM X TO Y . READ IN YOUR OWN DATA AND TEST YOUR PROGRAM .

go

REPLY : YES ,OTHERWISE NO

no

DO YOU WANT TO TERMINATE YOUR INSTRUCTION SESSION ?
(REPLY : YES OR NO)

no

IF YOU WANT TO EXECUTE PROGRAMS AT THIS TIME
THEN REPLY : YES ; OTHERWISE REPLY : NO AND THE INSTRUCTION
WILL CONTINUE .

no

REPLY WITH THE NUMBER OF THE LESSON YOU WISH TO COVER

EXECUTION BEGINS...

*** LESSON 7 ***

THIS LESSON SUMMARIZES THE BASIC DEFINITIONS AND BASIC STATEMENTS THAT YOU HAVE LEARNED IN CAI-BASIC .

A. BASIC DEFINITIONS

1. ALPHA-NUMERIC CHARACTERS :

A) DIGITS : 0-->9

B) LETTERS : A-->Z

C) SPECIAL CHARACTERS : * , / + - () = ' , \$

2. STATEMENT NUMBERS : ONE TO FOUR DIGITS (0-->9999)

3. STRING : ANY SEQUENCE OF ALPHA-NUMERIC CHARACTERS ENCLOSED IN 'SINGLE' QUOTES . EG. 'HELP'

80

4. NUMBERS : (LIMITED TO 9 DIGITS)

A) INTEGERS : DIGITS WITH NO FRACTIONAL PART . EG. 5,7,10

B) REAL : DIGIT WITH A FRACTIONAL PART . EG. 5.0,7.31,-16.0
A NUMBER MAY BE PRECEDED BY A SIGN (+,-) , BUT IS ASSUMED TO BE POSITIVE IF NONE IS GIVEN .

5. VARIABLES :

A) SIMPLE VARIABLES : A SINGLE LETTER , OR A SINGLE LETTER FOLLOWED BY A DIGIT . EG A,A1,B6,Z0

B) ALPHA VARIABLES : A SINGLE LETTER FOLLOWED BY A DOLLAR SIGN (\$) EG. A\$,V\$

C) SUBSCRIPTED VARIABLE : (SINGLE LETTER)

(1) SINGLE SUBSCRIPT : <<LETTER>> (<<EXPRESSION>>)

(2) DOUBLE SUBSCRIPT : <<LETTER>> (<<EXPRESSION,EXPRESSION>>)

EG

A(5),Z(5,10),X(A*B,X**2)

80

5. OPERATORS : (LISTED IN DECENDING HIERARCHY)

- A) EXPONENTIATION **
- B) MULTIPLICATION *
- C) DIVISION /
- D) ADDITION +
- E) SUBTRACTION -

6. EXPRESSIONS :

- A) SINGLE NUMBER OR VARIABLE EG. 10,-.53,D,X(I,J)
- B) BUILT IN FUNCTION EG. SQR(10),TAN(.75)
- C) ARITHMETIC EXPRESSION : EXPRESSIONS SEPARATED BY OPERATORS AND GROUPED BY PARENTHESIS . EG. 5+6.0 , A**2(3*X-k)

80

7. RELATIONS

- | | | |
|-------|--------|------------------------------|
| A) GT | A GT B | A GREATER THAN B |
| B) GE | A GE B | A GREATER THAN OR EQUAL TO B |
| C) LT | A LT B | A LESS THAN B |
| D) LE | A LE B | A LESS THAN OR EQUAL TO B |
| E) NE | A NE B | A NOT EQUAL TO B |
| F) = | A = B | A EQUAL TO B |

B. BASIC STATEMENTS

- 1. REM << ANY SET OF ALPHA-NUMERIC COMMENTS >>
- 2. READ << VARIABLE,.....,VARIABLE >>
- 3. END

80

- 4. LET << VARIABLE >> = << EXPRESSION >>
- 5. PRINT << 'STRING' OR EXPRESSION,.....,'STRING' OR EXPRESSION >>
OR SIMPLY PRINT
- 6. DATA << 'STRING' OR NUMBER,.....,'STRING' OR NUMBER >>

```

7. RESTORE OR RESTORE$
8. IF << EXPRESSION >> << RELATION >> THEN << STATEMENT NUMBER >>
9. GO TO << STATEMENT NUMBER >>
10. ON << EXPRESSION >> GO TO << STATEMENT NUMBER,....,STATEMENT NUMBER >>
11. FOR << SIMPLE VARIABLE >> = << EXPRESSION >>
    TO << EXPRESSION >> STEP << EXPRESSION >>
    ....
    ...
    ...
NEXT << SIMPLE VARIABLE >>
12. DIM << LETTER >> ( << INTEGER EXPRESSION >> )          OR
    DIM << LETTER >> ( << INTEGER EXPRESSION, INTEGER EXPRESSION >> )
13. GOSUB << STATEMENT NUMBER >>
    ...
    ...
    ...
RETURN
GO

```

THAT CONCLUDES YOUR INSTRUCTION WITH CAI-BASIC .
 HOWEVER , YOU ARE INVITED TO USE WHATEVER FACILITIES OF CAI-BASIC
 YOU DESIRE AT ANY TIME . IF YOU HAVE NOT RUN PROGRAMS UNDER
 THE OS/BATCH MODE (PUNCHING YOUR OWN CARDS AND HANDING THEM
 ACROSS THE COUNTER TO BE RUN), YOU SHOULD GET THE BASIC MANUAL,
 TECHNICAL NOTE NR. 0211-12 , IN ROOM I-147 TO FIND THE PROPER
 JOB CONTROL CARDS REQUIRED . GOOD LUCK WITH THE COMPUTER , AND
 REMEMBER IT ONLY DOES WHAT YOU TELL IT TO DO - GIGO (GARBAGE IN
 GARBAGE OUT).

DO YOU WANT TO TERMINATE YOUR INSTRUCTION SESSION ?
 (REPLY : YES OR NO)

no

IF YOU WANT TO EXECUTE PROGRAMS AT THIS TIME
 THEN REPLY : YES ; OTHERWISE REPLY : NO AND THE INSTRUCTION
 WILL CONTINUE .

yes

**** CAIBASIC COMPILER ****

THE CAIBASIC COMPILER IS A LINE BY LINE INTERPRETER .THE BASIC

INTERPRETER ACCEPTS STANDARD BASIC STATEMENTS , AND IT ANALYZES EACH BASIC STATEMENT AS IT IS INPUT . AN ADDED FEATURE OF THE CAIBASIC COMPILER IS AN EDITING AND A DEBUGGING ROUTINE THAT ALLOWS THE USER TO ADD , DELETE AND CORRECT STATEMENTS ; AND TO GET A LISTING OF ALPHA-NUMERIC AND NUMERIC DATA USED , AND A TRACE OF ALL SIMPLE VARIABLES AS THEY ARE ASSIGNED VALUES IN THE PROGRAM.

THE DEBUG FEATURE IS USED BY ADDING THE KEY WORD DEBUG AS A STATEMENT TO YOUR PROGRAM .

THE EDITING MODE IS AVAILABLE TO THE USER WHEN AN EXECUTION ERROR OCCURS AND AFTER SUCCESSFUL EXECUTION .

IN THE EVENT OF AN INPUT ERROR THE INTERPRETER WILL ANALYZE THE ERROR AND PRINT AN ERROR MESSAGE. IF THIS OCCURS FIND THE ERROR ,AND INPUT THE CORRECT BASIC STATEMENT FOR THE CURRENT LINE OF INPUT .

(NOTE : TYPING ERRORS CAN BE DELETED BY TYPING FOUR DOLLAR SIGNS (\$\$\$\$) ON THE SAME LINE AS THE ERROR , HITTING CARRIAGE RETURN , AND INPUTTING THE LINE AGAIN .)

**** CAIBASIC EXECUTION ****

INPUT BASIC PROGRAM NOW (ONE LINE AT A TIME)

```
let x=1
gosub 100
print x
go to 9999
  100 let x=x+1
    if x gt 3 then 150
    gosub 100
  150 return
9999 end
```

DO YOU WANT TO EDIT YOUR PROGRAM
REPLY : YES OR NO .

yes

**** CAIBASIC EDIT MODE ****

BY USING THE REFERENCE NUMBERS LISTED TO THE LEFT OF YOUR BASIC PROGRAM STATEMENTS YOU MAY ADD , DELETE , OR CORRECT ONE LINE OF THE PROGRAM AT A TIME . IN ALL EDITING THE FIRST STEP IS TO INPUT THE PROGRAM STATEMENT REFERENCE NUMBER AND HIT THE CARRIAGE RETURN . THE SECOND STEP DEPENDS ON WHAT EDITING YOU DO :

1. DELETE
THE BASIC STATEMENT REFERENCED IS DELETED BY TYPING THE LETTERS DEL
2. CORRECT
TO CORRECT THE BASIC STATEMENT REFERENCED TYPE IN THE COMPLETE CORRECT BASIC STATEMENT .
3. ADD
A BASIC STATEMENT IS ADDED 'AFTER' THE BASIC STATEMENT REFERENCED BY TYPING THE LETTERS ADD1 FOLLOWED BY THE BASIC STATEMENT . ALL BLANKS FOLLOWING THE LETTERS ADD1 WILL BE INCLUDED IN THE BASIC STATEMENT . TO PLACE A STATEMENT 'BEFORE' THE FIRST STATEMENT IN THE PROGRAM , USE THE REFERENCE NUMBER 0 .

```

1      LET X=1
2      GOSUB 100
3      PRINT X
4      GO TO 9999
5      100 LET X=X+1
6          IF X GT 3 THEN 150
7      GOSUB 100
8      150 RETURN
9      9999 END

```

INPUT REFERENCE NUMBER NOW
8

INPUT EDITING NOW (DEL,BASIC STATEMENT,ADD1....)

150 let x=x+1

MORE CORRECTIONS TO BE MADE ?? REPLY: YES ;
OR REPLY: NO AND THE EDITED PROGRAM WILL BE EXECUTED .

yes

```

1      LET X=1
2      GOSUB 100
3      PRINT X
4      GO TO 9999
5          100 LET X=X+1
6              IF X GT 3 THEN 150
7                  GOSUB 100
8                      150 LET X=X+1
9                          9999 END

```

INPUT REFERENCE NUMBER NOW

INPUT EDITING NOW (DEL,BASIC STATEMENT,ADD1....)

add1 return

MORE CORRECTIONS TO BE MADE ?? REPLY: YES ;
OR REPLY: NO AND THE EDITED PROGRAM WILL BE EXECUTED .

no

```

LET X=1
GOSUB 100
PRINT X
GO TO 9999
    100 LET X=X+1
        IF X GT 3 THEN 150
            GOSUB 100
                150 LET X=X+1
                    RETURN
9999 END

```

7
